SSIG closing remarks

B. Cecconi

SSIG activity this week

We are pleased to be in, and it has been a very successful meeting for SSIG!

- **Semantics**: UCD, nomenclature
  - new UCD proposed for discussion.
  - discussion on how to qualify spectroscopic observable quantities: tools are using UCDs (not utypes…)
  - Nomenclature: draft observations facility data model (VOFacility extending VOResource); draft name resolver.

- **DAL**: TAP/ADQL
  - EPN-TAP is using "ivo_hashlist_has" function (from RegTAP) for searching into multiple-values fields.
  - discussions on TAP and s_region (coordinate system frame statement removal)

- **TDIG**: VOEvent, TimeSeries
  - inputs for VOEvent (more complete implementation of STC in VOEvent; possibility to refer to a named target only; using external URI for contact names and author names)
  - Presentation on time series support description in EPN-TAP.

- **Apps**:
  - ESAsky includes planetary target search!

Upcoming SSIG activity

- **Semantics**: UCD, nomenclature
  - helping UCD update process.
  - Nomenclature: follow up activity on Facility nomenclature

- **DAL**: TAP/ADQL
  - work with DAL to check how to know the direction of longitudes (Eastward or Westward).

- **TDIG**: VOEvent, TimeSeries
  - setting up real-life VOEvent services within Europlanet

- **Apps**:
  - New SAMP messages will be proposed
  - Study test EPN-TAP service on CADC solar system target observations

- **SSIG**: find a co-chair (next IPDA meeting, DLR, Berlin, July 2017)
