

Solar System Interest Group closing remarks

- **Semantics:**
 - UCD evolution process: new SSIG UCDs
 - Facility nomenclature: Github repository to gather lists (e.g., [GitHub VESPA FacilityList?](#))
- **TDIG:**
 - TimeSeries = basic data product type for SSIG science
 - EPNcore dictionary keywords for time axis => TimeSeries?
 - Discussion about heterogenous TimeSeries
 - VOEvent 2.1 to be proposed to TDIG
 - Automated storage of VOEvent in table (then TAP/ADQL query)
- **TAP/ADQL:**
 - ADQL Geometric queries on planetary objects requires to define Ref Frame. Not possible for now.
 - ***SSIG basic need: capability to tell whether East- or West-ward longitudes are in use***
- **Registry:**
 - Problem with RoR: should be solved soon !?!
- **EPN-TAP:**
 - EPNcore standardization to come...
 - Data centers (ESAC, CADC, IPAC, CDS...) interested in sharing solar system sciences data products
