

Generic Dataset Observation datamodel

F. Bonnarel with
M. Louys, D. Tody, T. Budavari,
G. Greene

Generic dataset concept

- Metadata:
 - Everything common to all datasets: Access, Curation, DatasetID packages.
 - Everything too complex to be in Typed protocol : High level characterization (FoV, variation maps), Provenance, Complex linking.
- Queries =
 - non type specific (= generic) queries
 - Querying by datamodel (Observation, char) using ADQL+utypes .

Observation data model

- See more tomorrow (DM session 2)
- UML Diagram and XML schema available
- Hooking basic metadata (DatasetID) to Field Of View (obs:char/coverage.support) or provenance -→ see Tamas slides for connexion with footprint services.
 - DAL Query response version = F O V integrated in the VOTABLE
 - (HLA provides such conversion from the Stc footprint embedded into Observation container to SIA query response extension)
- Provides a frame for complex accesses methods (Access package extensions or DataLinks)
