

VIRTUAL ASTRONOMICAL OBSERVATORY

Building and Analyzing SEDs

Janet DePonte Evans (SAO)

The VAO is operated by the VAO, LLC.

Overview

- Software Development Model
- Requirements
- Baseline Components
- Design Overview
- Delivery Path
- Development Scoping efforts
- Conclusion

Software Development Model

- Development model borrows from several models and historic experience
- Waterfall Model
 - Defined project phases
 - Requirements, design, implementation, and test
 - Spend extra up-front time so early design considers final goal
 - Design data structures and libraries
 - Factor platform and runtime needs
 - Choose programming or scripting language
 - Diverge by not completing each phase before moving to next
- Spiral Model
 - Schedule series of requirement/design/implementation efforts
 - Test feedback loop of intermediate internal releases (or betas)
 - Assess risk (or liens) up front and along the way
 - External (hardware, science feedback) or internal (OTS upgrade)
- Historic experience
 - Based on years of processing and development experience
 - Follow community standards for compatibility with existing software
 - Leverage VAO efforts and define files to IVOA standards for compatibility

Requirements

- Provide Big Picture – R D’Abrusco/J McDowell
 - Develop project in steps with larger vision in hand
 - Year 1, Year 2 and Future development priorities identified
- Feedback to requirements
 - Team reviewing doc and working derived requirements
 - Science review and comment
 - Scientists from several disciplines
 - VAO Science Council / IVOA (Evanthia Hatziminaoglou)
 - Collecting use case
 - Soliciting practical threads that can be used as test cases
 - Year 1 and Overall
 - Use case doc on schedule for End Jan – *initial version*

SED Requirements Doc

High Level Requirements of the SED Tools

R. D'Abrusco, J. McDowell

December 6, 2010

1 Introduction

This document describes the scientific requirements for the SED builder and analysis tool. It is divided in three sections describing the 'SED building' (section 2, 'SED analysis' (section 3) and 'SED visualization' (section 4) capabilities of the tool respectively. Each section is split in multiple subsections, each one describing a distinct requirement of the tool. Each distinct requirement discussed in this document is associated to a label indicating the general section of the document (SED builder - SED analysis - SED visualization) where the requirement can be found, and a unique index (for example, **SED.an.3.1** for the first sub-requirement of the third requirement of the analysis section). These labels are used to provide a quick reference to the different parts of the requirements and provide a handle to the hierarchical structure of the document. The hierarchy of requirements is also shown in the tree-graph in figure 1, which is associated to the break-down scheme adopted throughout this document. The labels (in boldface in the document) are also used in tables 1, 2, 3 and 4.

2 SED builder

The overall goal of this section of the document is to outline the basic capabilities of the tool regarding the ability to read different data types, their conversion to VO formats and their combination to create the SED. The Spectral Energy Distribution (SED) of a source can be built by combining photometric points and spectroscopic segments; the basic definitions of these two different type of data given below:

1. Photometric points. A photometric point is specified, at a very basic but general level, by assigning three numbers ($s, f(s), t$), namely a spectral coordinate s (either a wavelength, a frequency or an energy), a flux $f(s)$ (or flux density, or luminosity) measured at that spectral coordinate, and the time t of the observation. While the time coordinate associated to a photometric measurement is a fundamental information of its own, in the following the explicit dependence will be dropped for the sake of the simplicity. At the same time, the time t of the observation will be considered part of the metadata accompanying every measurement. In the ideal case, error estimates for these values are also given. Sometimes, upper limits on $f_u(s)$ are the only available data; in these cases, the points need to be labelled as such but otherwise handled as if they were detected values for this section (builder tool) of the software;

Table 3: Break-down of the requirements and proposed prioritization for the "SED analysis" section of the document.

Task	Sub-task	Sub-sub-task	Description	Year 1	Year 2	Later...
SED.an.1			Read/convert aggregate SED	X		
SED.an.2			Read rebinned SED		X	
SED.an.3			Convert from agg.to rebinn.		X	
	↘	SED.an.3.1	Choose spectral coord. grid		X	
		SED.an.3.2	Choose units of measure		X	
		SED.an.3.3	Measure bin fluxes		X	
SED.an.4			Fitting of SEDs	X		
	↘	SED.an.4.1	Fit aggregate SEDs	X		
		SED.an.4.2	Fit rebinned SEDs		X	
		SED.an.4.3	Library of template models	X		
		SED.an.4.4	Composed models	X		
		SED.an.4.5	Specify spectral interval	X		
		SED.an.4.6	Estimate goodness-of-fit	X		
		SED.an.4.7	Estimate confidence lev.	X		
		SED.an.4.8	User-def. model funct.		X	
		SED.an.4.9	User-def. tabular models		X	
		SED.an.4.10	User-def. statistics			X
		SED.an.4.11	Estimate integr. fluxes		X	
		SED.an.4.12	Estimate fluxes in ref. filters			X
SED.an.5			Template fitting		X	
	↘	SED.an.5.1	Routine interf. for libraries		X	
		SED.an.5.2	Interf. to synthetic libraries			X
		SED.an.5.3	Add comp. to libraries			X
		SED.an.5.4	Spatial-spectral fit			X
		SED.an.5.5	Spatial-spectral fit in interv.			X
		SED.an.5.6	Evaluate aperture correct.			X
SED.an.6			Population analysis		X	
	↘	SED.an.6.1	Evaluate pop. statistics		X	
		SED.an.6.2	Eval. pop. statistics in interv.			X
		SED.an.6.3	Eval. integrated quantities		X	
SED.an.7			SEDs classification			X
	↘	SED.an.7.1	Clustering of SEDs			X
		SED.an.7.2	Classification of SEDs			X
SED.an.8			Astrophysics and cosmology		X	
	↘	SED.an.8.1	Apply extinction laws		X	
		SED.an.8.1.1	User-provided ext. laws		X	
		SED.an.8.1.2	Libraries of ext. laws		X	
		SED.an.8.1.3	Tabular descript. of ext. laws			X
		SED.an.8.1.4	Redshift-depend. ext. laws			X
		SED.an.8.2	Modify redshift of SED		X	
		SED.an.8.3	Estimate bolometric flux		X	
		SED.an.8.4	Bolometric lum. with distance		X	
SED.an.9			Convolution		X	

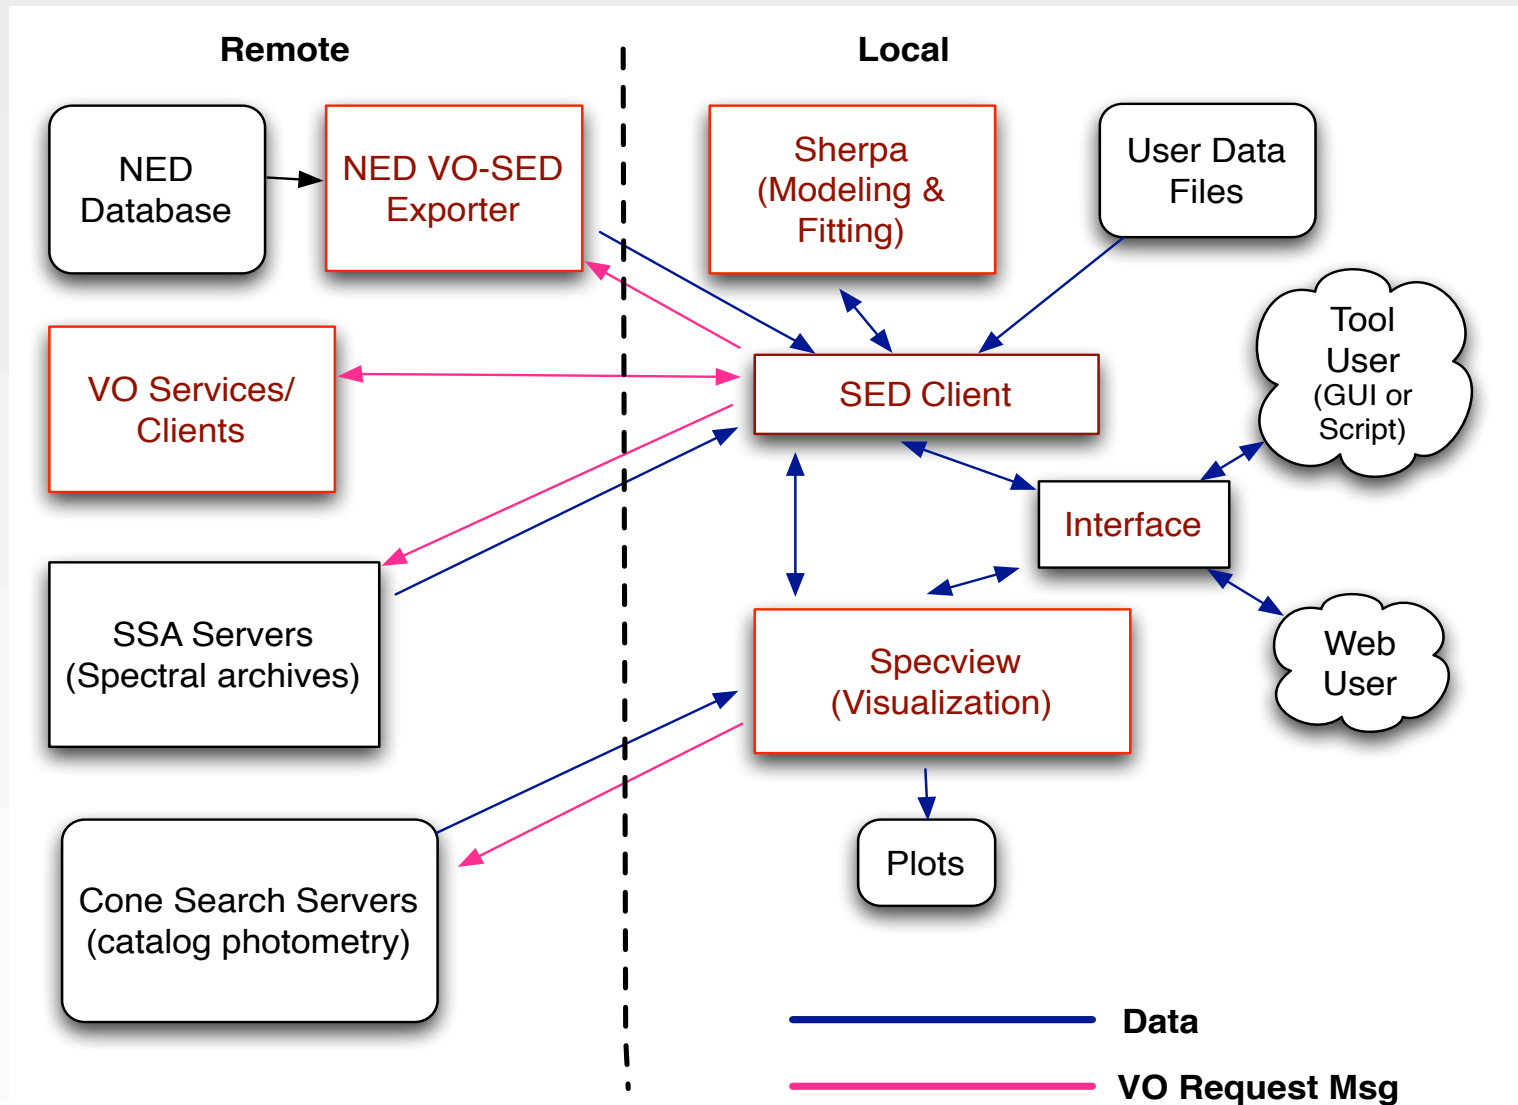

Baseline components

- SED DataModel library & toolkit (SAO)
 - Jonathan McDowell, Mark Cresitello-Dittmar, Joe Miller
- Generic SED Service in DALserver framework (NRAO)
 - Doug Tody
- NED SED Service (IPAC)
 - Joe Mazzarella, Rick Ebert, Olga Pevunova, Ashish Mahabal
- SpecView (STScI) – Visualization
 - Ivo Busko
- Sherpa (SAO) – Spectral Modeling and Fitting
 - Stephen Doe, Brian Refsdal, Dan Nguyen

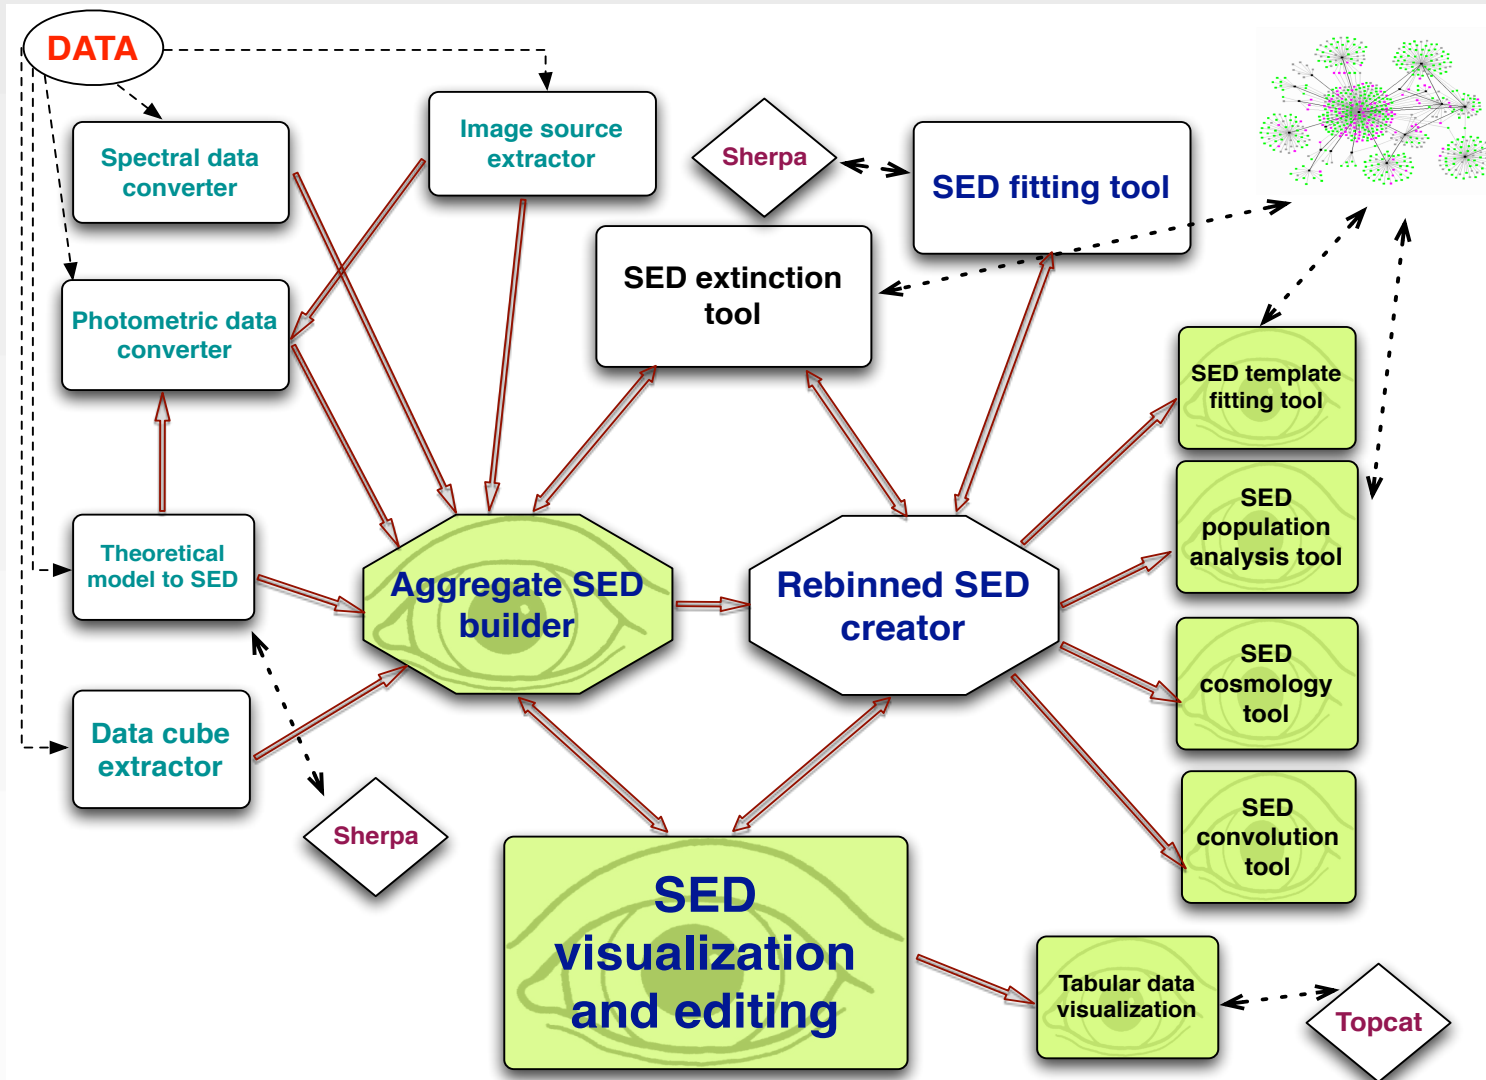

Design Overview – Yr1

Design Overview – Yr 2+

Delivery Path

- IVOA Note Photometry and SED/DM
 - J. McDowell – Done
- Derived requirements for components (End Nov)
 - SED Library/SED Service Framework/NED/Specview/Sherpa
 - Overall and highlight year 1
 - Requirements buy-in by development team
 - Input for test case development
- Design (Early Jan)
 - SED Library/SED Service Framework/NED/Specview/Sherpa
 - High level for existing code; detailed for SED project

Delivery Path cont.

- **Beta1 release**
 - SED Library/SED Service Framework (Mid Feb)
 - NED/Specview/Sherpa (Early Mar)
 - Internal test and Informal Science Evaluation (Apr 1)
- **Beta2 release**
 - SED Library/SED Service Framework (Early May)
 - NED/Specview/Sherpa (Mid May)
 - Internal & VAO project level test and evaluation (Early Jun)
- **Yr 1 release (End Jul)**
 - Includes unit and regression tests
 - Packaging and project turnover
 - Internal & VAO project level test and evaluation

Schedule Overview

	A	B	C	D	E	F	G	H	I
	TAG	INSTITUTION	TASK	DESCRIPTION	START DATE	END DATE	LIEN	Actual END	Edit Notes
1	REQ	ALL	REQ Review	Internal Requirements Review & Feedback	Early Sep	22-Oct	None		
2	REQ	SAO/Raffaele	Requirements Update	Requirements Update based on feedback; 1d Year 1 development	22-Oct	4-Nov	RR		
3	REQ	SAO/JDE	SED Requirements 1.0	Post Requirements; Get VAO project sign-off	4-Nov	End Nov			
4	REQ	SAO/Raffaele	Solicit Input on Science Use Cases	Create separate doc outlining SED Science use cases; will use for testing SED app	Mid Nov	End Jan			
5	REQ	STDS/DToday	IVOA Note	SED/DM specification doc; cover DM and access protocol; help from JCM/MCD	Mid Nov	7-Dec-10	None		
6	REQ	IPAC/JMazz	Data Provider SED/DM Req	IPAC input on API specifications for toolkit; built on DM/Lib	Early Nov	Early Dec			
7	REQ	IPAC/JM	SED Visualization evaluation (SVE)	Evaluation of web-based and desktop-based applications best suited for SED visualization, editing, and fitting and analysis tools; to provide requirements for Specview modifications	Mid Nov	Mid Feb			
8	REQ	SAO/RD	SED Requirements update (1.1)	SED Req update based on SVE report	End Nov	End Feb	SVE		
9	REQ	SAO/RD	SED Use Case Doc 1.0	Outline Science Use cases	End Nov	End Feb	Solicit Science Use Cases		
10	REQ	STDS/DToday	IVOA Note update	IVOA note update after mtg	7-Dec-10	End Feb	IVOA Note		New(11/23)
11	DM	SAO/MCD	SED/DM Lib Requirements	SED/DM requirements doc derived from IVOA Note + Data Provider SED/DM Req; Overall and Highlight Yr1	Early Oct	Mid Dec	SED Req 1.0, IVOA Note, Data Provider SED/DM Req		
12	DM	ALL	Req Review				SED/DM Lib Req		
13	DM	SAO/MCD	SED/DM Lib Design	High level existing; details for SED proj	Early Oct	Early Jan	SED Req 1.0, IVOA Note, Data Provider SED/DM Req; SED Lib Req, Req Rev		
14	DM	ALL	Design Review				SED/DM Lib Design		
15	DM	SAO/MCD	SED DM Library Beta1 (DMB1)	Provide a java library to (create,read, interpret, modify) SED data objects; include design for review & unit tests; some legacy code from NVO with review/update	Early Oct	Mid Jan	SED/Lib Design, Design Rev		
16	DM	ALL	Test & Eval Beta 1	Internal Unit test/Science Evaluation	Mid Jan	Mid Feb	SED DM Lib Beta1		
17	DM	SAO/MCD	SED DM toolkit Beta1 (SDM)	Access toolkit - High Level User Interface (HLUI); build on SED/DM library	Mid Jan	Mid Feb	SED/Lib Design		
18	DM	ALL	Test & Eval toolkit Beta1	Internal Unit test/Science Evaluation	Mid Feb	End Feb	SED DM toolkit Beta1		
19	DM	SAO/MCD	SED DM Lib & Toolkit Beta2	Updates based on Beta1 feedback - support Beta2 application turnovers	Mid Feb	Mid Apr	SED/Lib Design, Test & Eval Beta1		
20	ALL	SAO/JDE	Test & Eval Beta 2	Internal/Project level review; Evaluation & Feedback	Mid Apr	Early May	SED DM Lib & Toolkit Beta2		
21	ALL	SAO/JDE	FINAL Code Freeze	Integrated SED App	Mid Apr	Mid Jun	Test & Eval Beta2		
22	***S&P***								New Section(11/23)
23	S&P	S&P/Dtoday	SED Service Support in DALServer Framework Requirements	Derived requirements - Overall and Highlight Yr 1	Early Nov	Mid Dec	SED Req 1.0

90		IPAC/JM	GAL/FIT	Deploy capability to compare and fit SEDs with a library of galaxy model templates			from SOW		

Development Scoping Efforts

SedLib Class Diagram

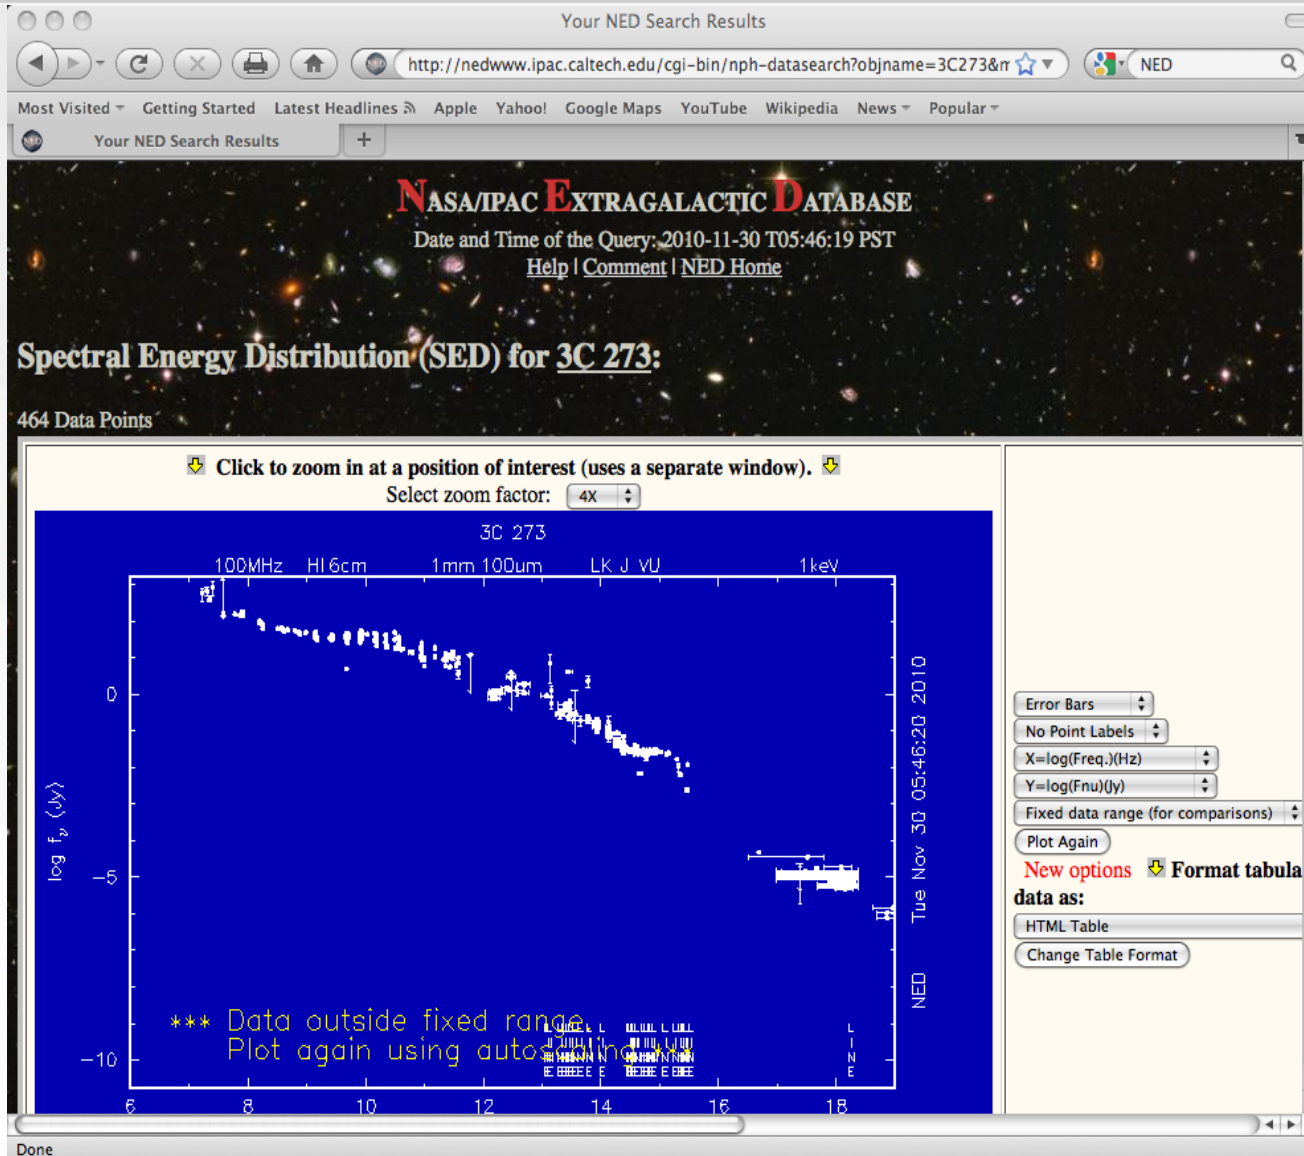

Notes

* This class diagram depicts a general hierarchy of the classes. It does not show in-depth usage between classes. For example io.Utils uses many classes in the jaxb package which are not shown here.

* The jaxb and jaxb_utils packages are only partial diagrams. A more complete picture can be seen in the jaxb_class_diagram document.

* Some of the utils package's classes are not well represented in the diagram. For example SEDLogger is a member of a number of the classes. These classes are pretty simple and well used that it didn't seem necessary to indicate every place they were used. A sub diagram at some point might be created to depict where these classes are used.
