

The LOFAR Archive: The First 10 Petabytes

Michael Wise
LOFAR Project Scientist
(ASTRON / UvA)

IVOA Interoperability Meeting
May 20, 2014

International LOFAR Telescope

*Europe-wide radio interferometry array @ 10-270 MHz
Resolution: 2 arcmin - 0.3 arcsec*

Onsala

*2010-2012: Commissioning phase
Dec. 2012: Cycle 0 observing cycle
Sep. 2013: Correlator upgrade
Dec. 2013: Cycle 1 observing cycle
May 2014: Cycle 2 observing cycle*

Chilbolton

- 46 operational stations online
- 38 NL stations, 8 international stations
- 4 new stations funded in:
Germany (1), Poland (3),
- Proposed stations: Ireland (1),
Italy (1), Finland (1), NL (2+)

Hamburg
to come ...

Potsdam

Poland funded

Jülich

Effelsberg

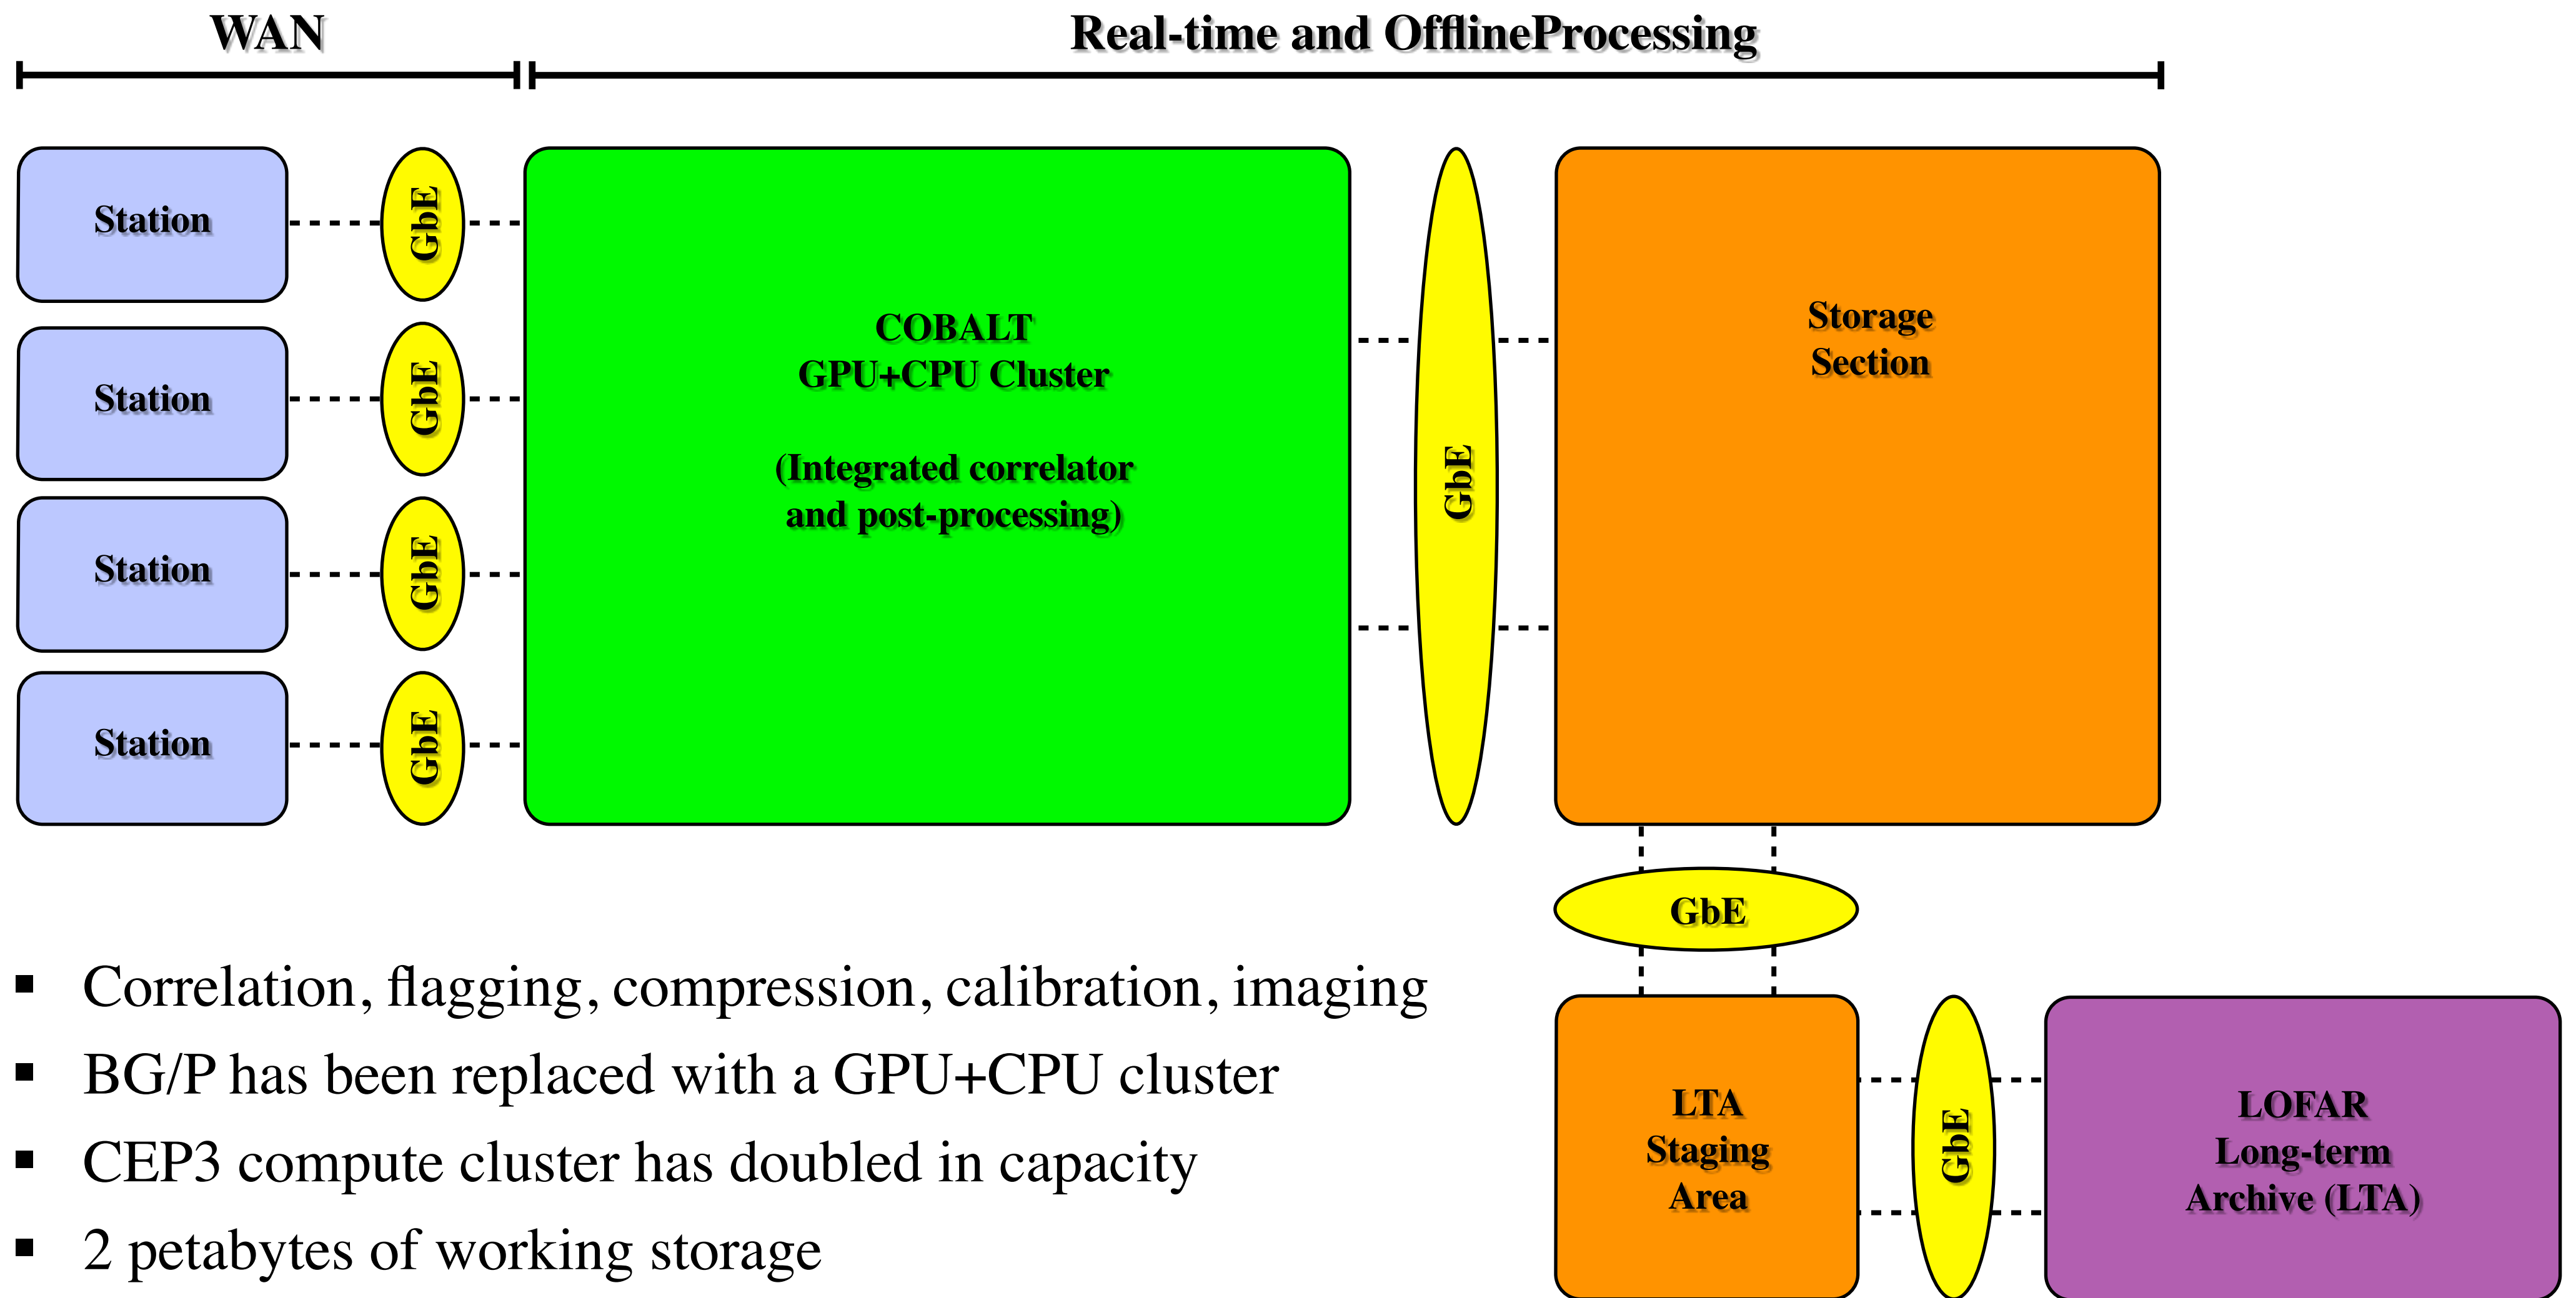

Tautenburg

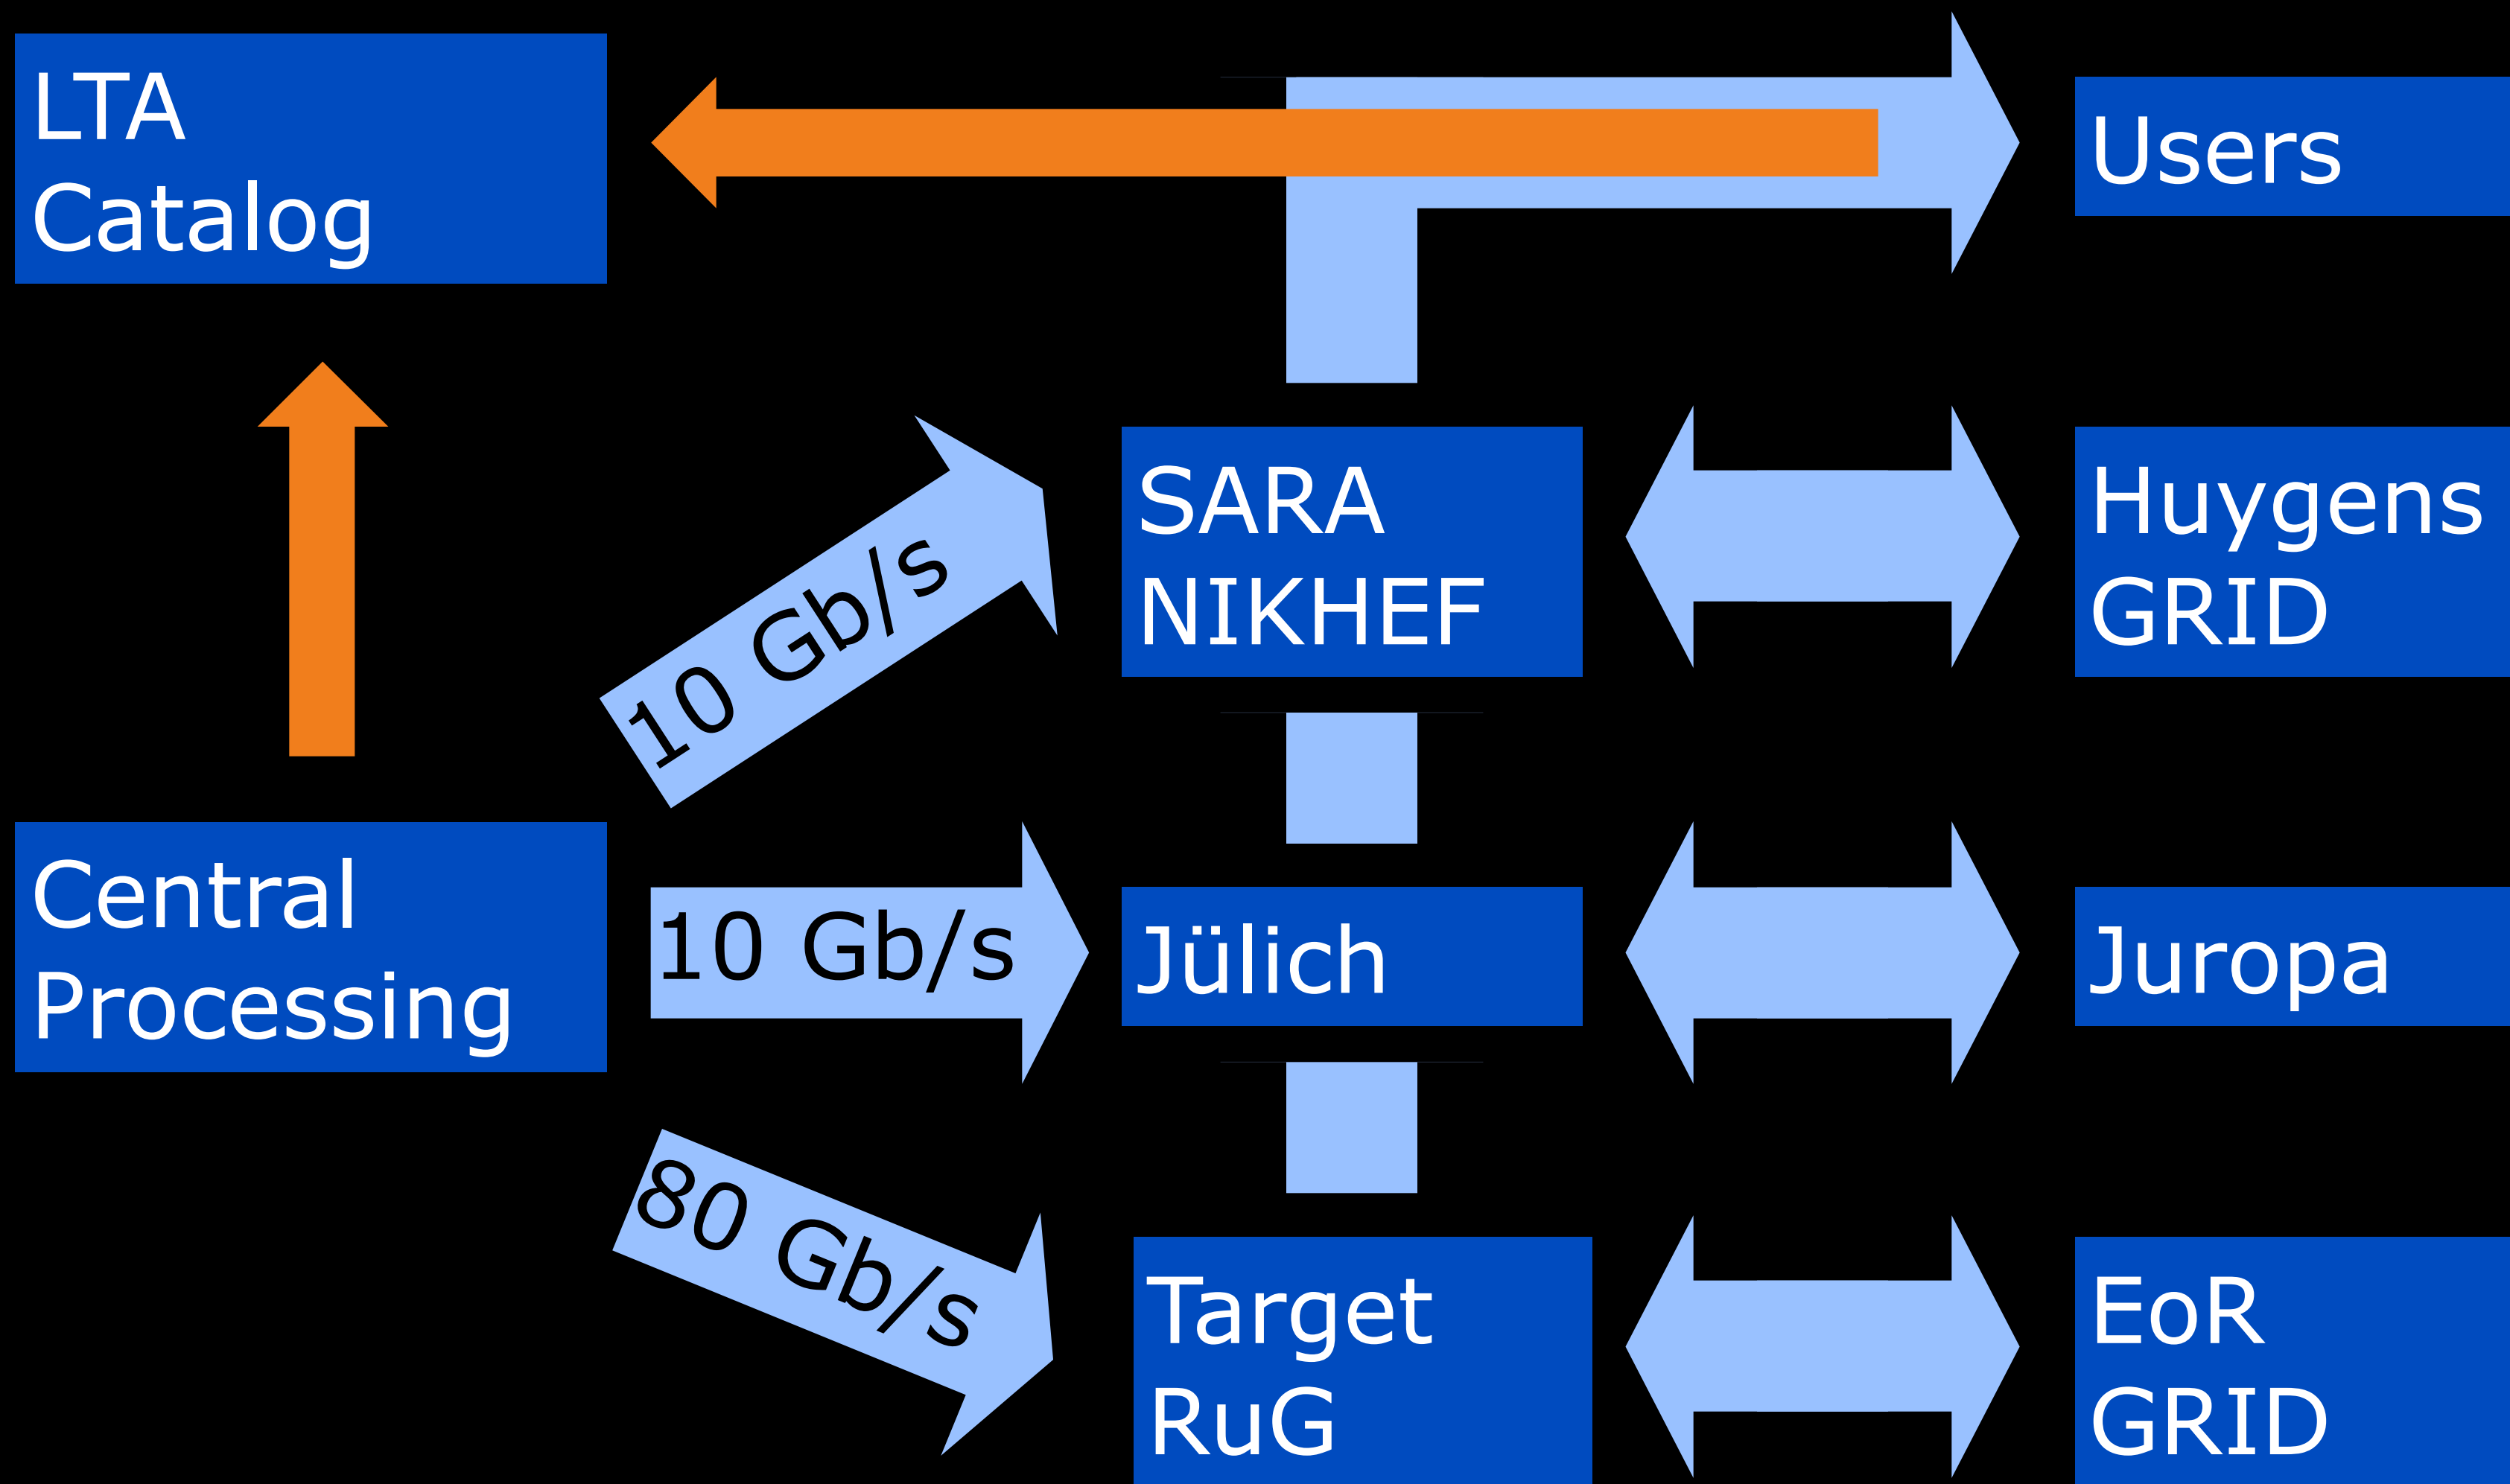

Unterweilenbach

Nançay

- Correlation, flagging, compression, calibration, imaging
- BG/P has been replaced with a GPU+CPU cluster
- CEP3 compute cluster has doubled in capacity
- 2 petabytes of working storage

LOFAR Science Drivers

Key Science Projects

Epoch of Reionization

Transients and Pulsars

High Energy Cosmic Rays

Surveys and the Distant Universe

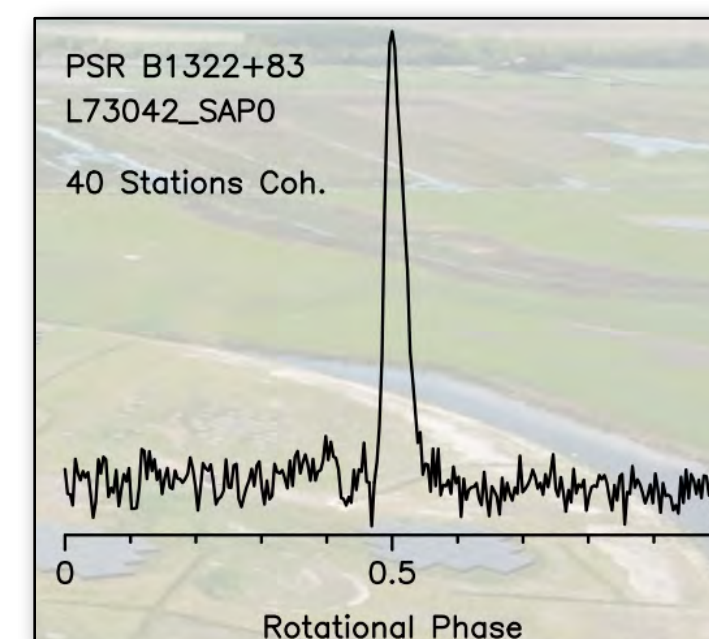

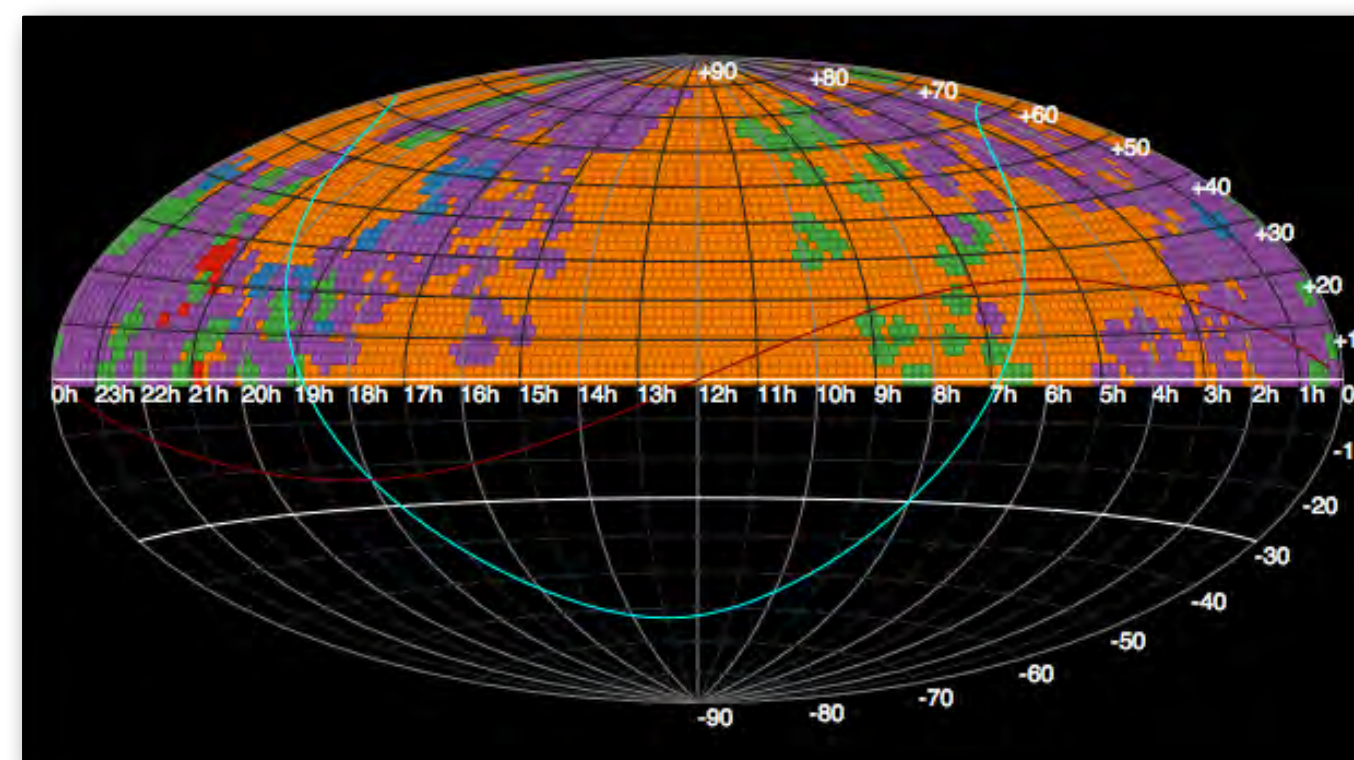

Cosmic Magnetism

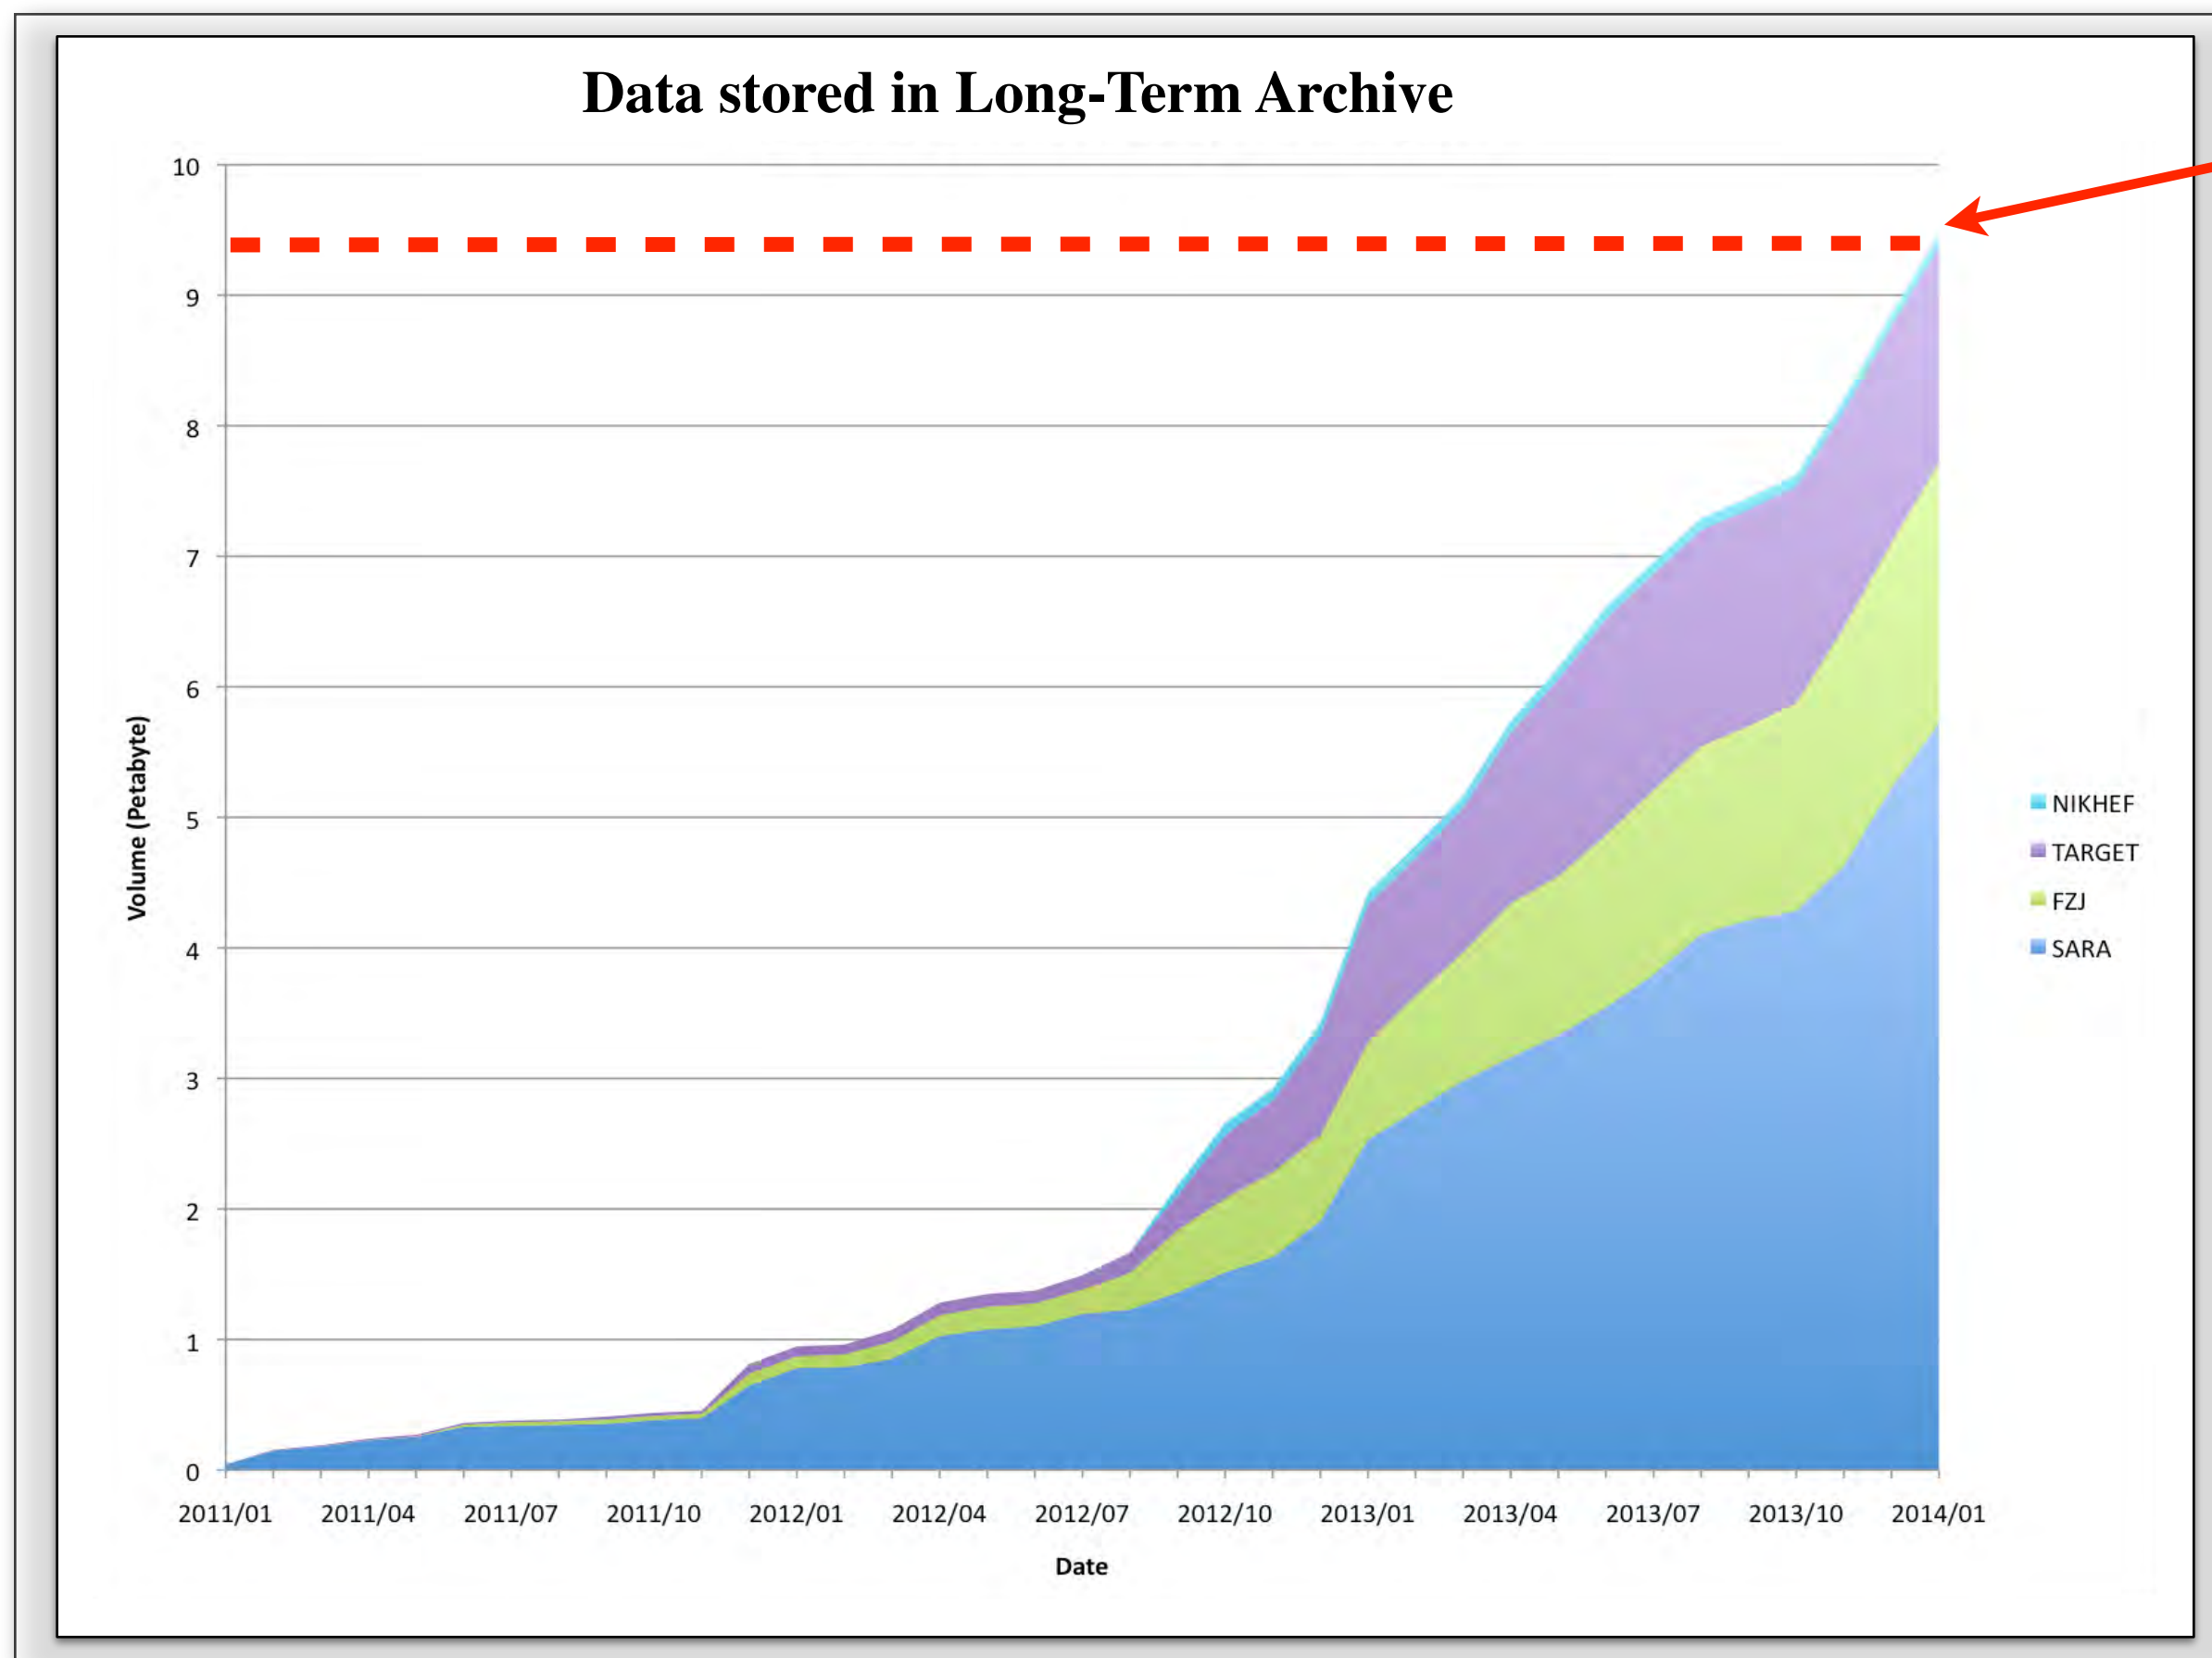

Solar Physics and Space Weather

⇒ Range of science goals lead to specialized observing modes

Variety of processing strategies lead to multiplicity of data products

- Velocity (*Raw data rates of ~13 Tbits/s, correlated ~10 TB/hr*)
- Volume (*100 TB visibilities, 1 TB cubes, 1 PB catalogues*)
- Variety (*raw telemetry, uv data, beam-formed data, 2D-3D-4D-5D cubes, RM cubes, light-curves, catalogues, etc.*)

9.4 PBytes as of Q1 2014

Total today: 11.3 PB

*Visibilities, images, and BF data
Does not include raw visibility data
Does not include derived products*

- 3 million data products
- 600 million files
- 11.3 Petabytes stored (5 sites, 2 countries)
- 500 TB per month archived
- 100 TB per month retrieved
- Eleven 10 Gb/s connections

*LOFAR LTA team: G.A.Renting,
H.A.Holties, N.Vermaas, W.J.Vriend*

Multifrequency Snapshot Sky Survey

HBA Survey now complete

Initial catalog release Q4 2014

LBA Survey observing resumes Fall 2014

LBA catalog release in Q3 2015

MSSS Image Archive

The Multifrequency Snapshot Sky Survey (MSSS) is the first major observing program to be carried out with LOFAR during its ongoing commissioning phase. The primary goal of MSSS is to produce an accurate and detailed low frequency sky model, which will be used as the basis of calibrating images produced in the future by LOFAR.

Position [deg]
ICRS Position, RA,DEC, or Simbad object (e.g., 234.234,-32.45)

Field size [deg]
Size in decimal degrees (e.g., 0.2 or 1,0.1)

Intersection type
 Image overlaps Roi
 Image covers Roi
 Roi covers image
 The given position is shown on image
Relation of image and specified Region of Interest.

Obs. Freq. No selection matches all, multiple values legal.
 HBA Average
 120 MHz
 125 MHz
 129 MHz
 135 MHz
 143 MHz
 147 MHz
 151 MHz
 157 MHz

Table Sort by Limit to items.

Output format
