TIME DOMAIN INTEREST GROUP

http://www.voevent.org/

VOEVENT

➤ Wide and growing acceptance; a common theme among new and upcoming projects.

➤ The **VOEvent Transport Protocol**, the "missing link" in terms of event distribution, is moving towards standardization (PR as of 4 May; discussion at this InterOp; RFC upcoming).

➤ Looking to the future:

   ➤ Demanding new requirements from e.g. LSST

   ➤ Likely to drive further evolution of the standard

   ➤ LSSTC funded alert system study over the next ~year.

TIME SERIES DATA

➤ Clear feedback from focus sessions: complex time domain data products are the future.

➤ Building interest in this within the TDIG over many years, finally building toward critical mass.

➤ Fantastic presentations in the TDIG session, illustrating:

  ➤ The challenges we face (Sébastien Derriere)

  ➤ A potential solution for the future (Petr Skoda)

➤ Incumbent on the TDIG now to build on that momentum, work with the community to fully establish requirements, engage with IVOA WGs to address them.

TDIG SESSION

➤ Best attended TDIG session yet!

➤ Reflective of real enthusiasm for the field in the community.
