# Data Model Working Group

**Closing Session** 

Chair: Mark Cresitello-Dittmar Vice-Chair: Laurent Michel

#### **Session Summary - DM1**

#### VO-DML

- A lot of activity
- Implementations (DS, STC2, 'Sample', etc)
  - Interoperable
- Work to be done on user experience
  - "How to" note(s)
- Otherwise ready for PR

- VO-DML Mapping to VOTable
  - Documentation in progress
  - Active prototyping efforts evaluating serialization strategy.
    - possibly vs alternates
  - High priority for Trieste
    - Planning focus meeting in June

- Dataset Metadata
  - Model in good shape
  - Implementations
    - Modeler implementation(s)
    - Need external 'use case' oriented impl.
  - Open topic: Identifier object mail list
  - Some dependency on STC2

- STC-2.0
  - Model has stabilized for broader WG review
  - WD draft delivered this week
  - Concern about scale and scope
    - focus team review (domain, model)
    - possibly break into component models
  - High priority item

#### Source DM

- Preliminary work on model (Gaia based)
  - General model structure
  - vo-dml mapping prototype support
  - Moving toward vo-dml modeling
- Other providers should be folded into scope of the model
- Encourage participants to contribute

#### Session Summary – DM2

- ObsCore-1.1:
  - Open topic: dataproduct\_type
    - (catalog/sourcelist/table)
  - RFC period ends May 15.
  - Example page: provides larger suite of examples to help users and implementers.

#### Session Summary – DM2

- Provenance
  - Use cases cover wide domain
    - Optical, Gamma-ray, Simulation
  - Derived from general framework (W3C)
    - Specialized for astronomy
    - considering existing models (SimDM, ObsCore, Dataset)
  - Implementations ahead of standard!

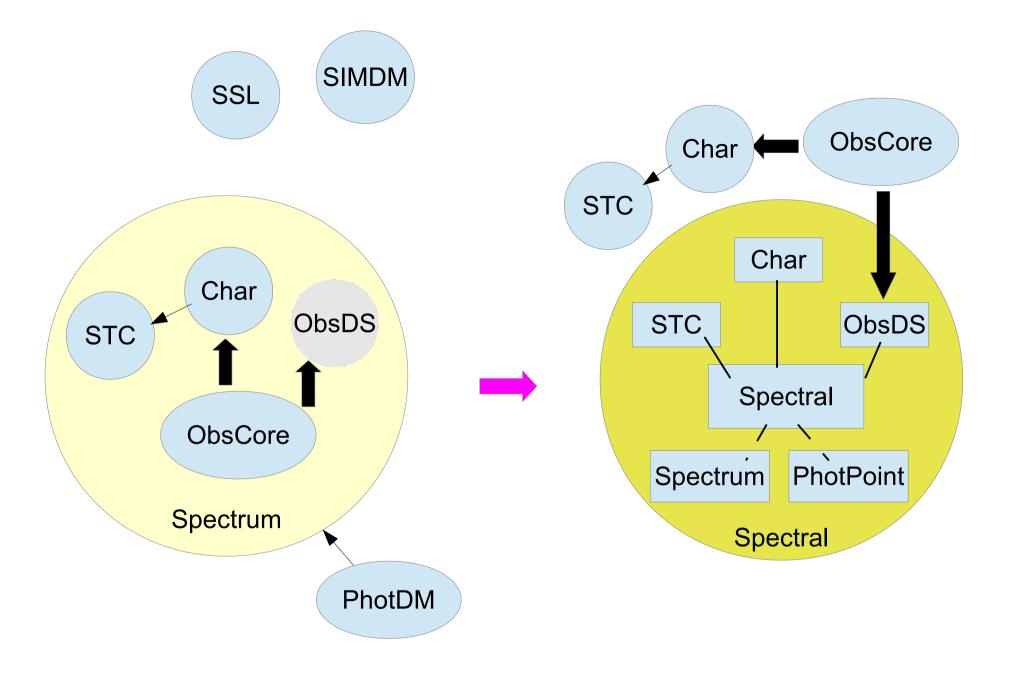

#### Remarks

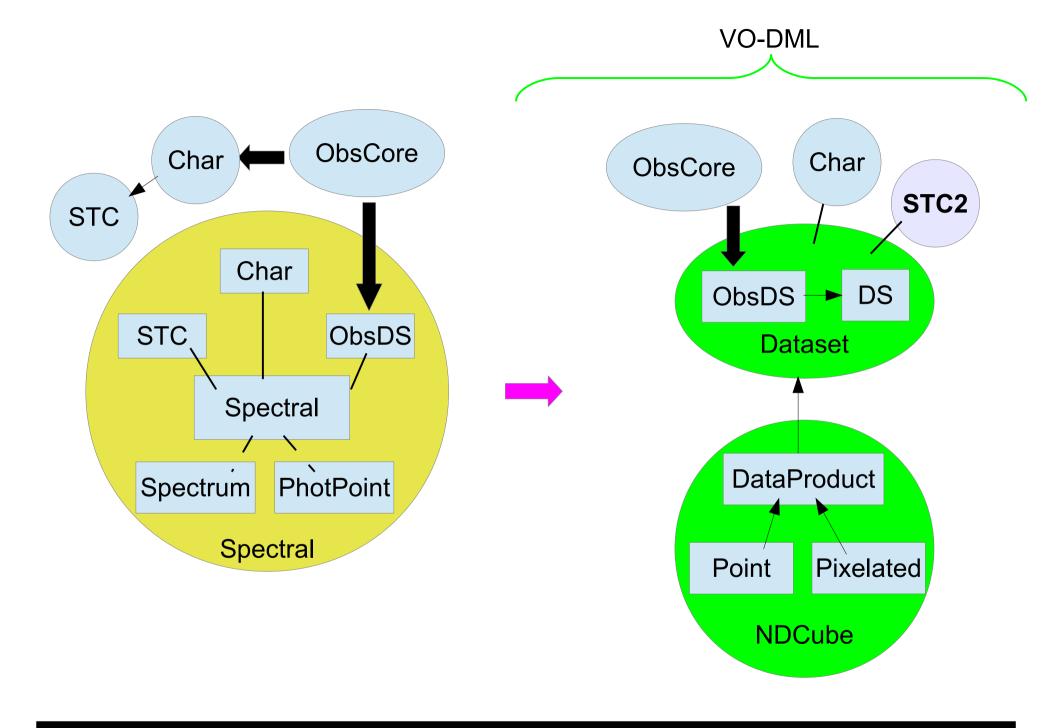

- Implementation requirements
  - refining implementation reqs. for data models
    - Component models do not exercise full science use case
    - Currently applications/protocols need to be designed, implemented before any dependent model can be approved.
  - Discussion on DM mail list

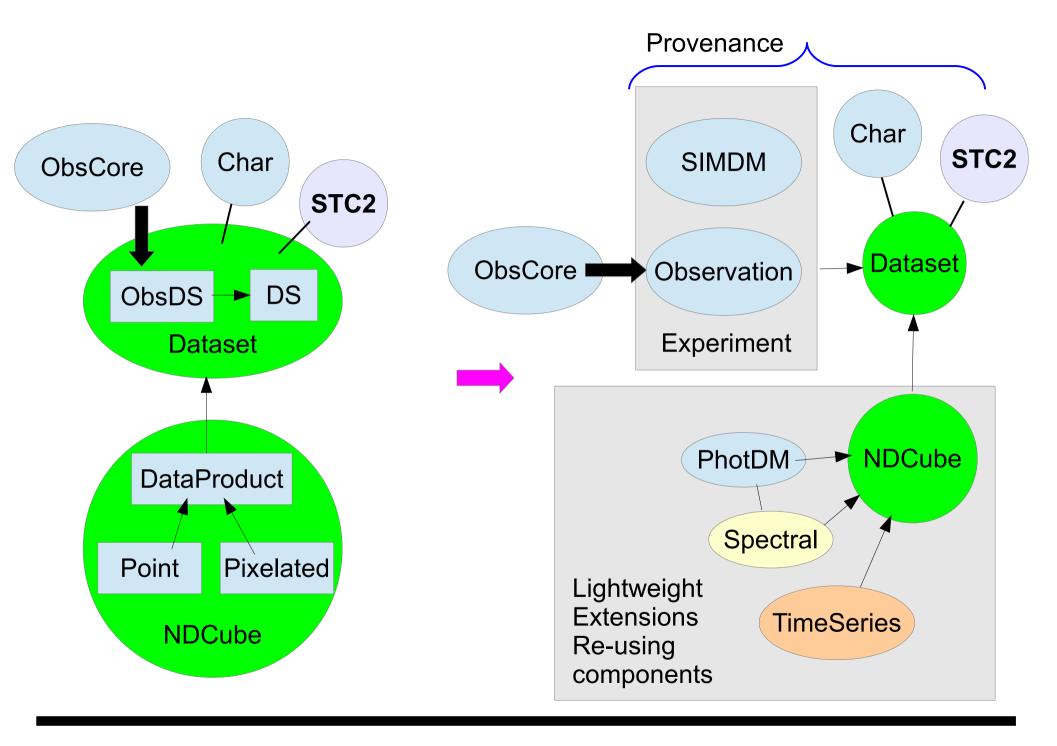

# Roadmap

2014 present
