

Registry WG

Closing Plenary

- Markus Demleitner
- Theresa Dower

Topics

- VOResource 1.1
- Table registration
- Registry Interfaces 1.1
- SimpleDALRegExt 1.1
- Maintenance

VOResource 1.1

- DOIs, ORCIDs (cf. DC&P)
- DataCite compatibility
- Vocabularies (less control?)
- test queries in interface?
- ... (10 years of VO and IT development)

Consensus building until Trieste. Watch registry@ivoa.net.

Table Registration

- Sebastien: Registering VizieR tables (split resources?)
- Pierre LS: Registering EPN-TAP tables (data model annotation)

Internal referencing in resource records (VOResource 1.1)?
Schema/Table reference in TAPRegText dataModel??

Registry Interfaces 1.1

Adding RofR, removing outdated search interface.

Open-ish question: How to replace RofR mechanism for listing searchable registries?

RFC July-ish (no boredom during your vacation...)

SimpleDALRegExt 1.1

Update to allow rich SIAv2 capability metadata.

Underlying model still seems fine.

PR really soon now.

Infrastructure Maintenance

- RofR (Janet/Yulie): Some bug fixes, active maintenance
\o/
- RegTAP at ESAC (Menelaus): Publicly released, works fine
\o/

Thanks to all the unsung heroes of our infrastructure.

Not Discussed

- Identifiers 2.0: It's REC!
- Spatial Searches: Waiting for tooling (cf. pgsphere splinter)
- DOI mappings: waiting for VOResource 1.1
- VOEvent, VOspace extensions: waiting for WG input

See you in Trieste
