# VO and IVOA

## **Vision of the VO:**

- Astronomical datasets, tools, services should work seamlessly together

## **IVOA:**

- An organisation that debates and agrees the technical standards that are needed to make the VO possible
- A focal point for VO aspirations, a framework for discussing and sharing VO ideas and technology
- Promoting and publicising the VO

# International Virtual Observatory Alliance

Enabling seamless access to astronomical data and services worldwide

The Virtual Observatory is a framework for interoperable access to astronomical data and services across all areas of astronomy. It provides unique scientific capabilities and is opening up new ways of using the rich data in astronomy archives and services.

Data access from many major astronomical archives is via VO interfaces, and you may use the VO and its tools without knowing it! VO tools and services provide a wide range of scientific capabilities including all-sky visualization, large scale catalogue cross-matching, complex queries and much more. **Try it for your science!**

The IVOA is an alliance of worldwide projects that develops standards and coordinates global aspects of the infrastructure. Participation in the *technical* and *scientific* development of IVOA is completely open.

International Virtual Observatory Alliance

## An alliance for the global vision of the Virtual Observatory

The vision of the Virtual Observatory (VO) is that astronomical datasets and other resources should work as a seamless whole. Many projects and data centres worldwide are working towards this goal. The International Virtual Observatory Alliance (IVOA) is an organisation that debates and agrees the technical standards that are needed to make the VO possible. It also acts as a focus for VO aspirations, a framework for discussing and sharing VO ideas and technology, and a body for promoting and publicising the VO.

Constituted in 2002, the IVOA has now been joined by 21 national and international VO projects.

## Open development of the necessary standards

The IVOA work is pursued by Working Groups and Interest Groups who meet at bi-annual *interoperability meetings*, that are open to participation by the whole community.

### WORKING GROUPS

Applications • Data Access Layer • Data Modelling • Grid & Web Services • Semantics • Resource Registry

### INTEREST GROUPS

Time Domain Astronomy • Solar System • Theory • Education • Data Curation & Preservation • Knowledge Discovery in Databases • Operations

## Using the Virtual Observatory

To find out more about using the VO – connect to the IVOA community via the web site, e-mail forums, collaboration wiki, and slack channels. Try the tools and services!

See the *bi-annual Newsletter* for highlights on the latest science applications, scientific results using VO tools, and a calendar of events.

ivoa.net

International Virtual Observatory Alliance

# What is the Virtual Observatory?

- **Operational framework** for interoperable access to astronomical data and services across all areas of astronomy
- Provides unique scientific capabilities, opening up new ways of using rich data in astronomy archives and services
- **A pioneer of FAIR data sharing - an existing global framework** – populated by major data providers (space and ground based) that is heavily used by the community (*e.g. Gaia data access is fully VO*)
- **Re-used and customized** by planetary science (EuroPLANET), atomic and molecular physics (VAMDC) and materials sciences (via RDA Working Group)

# IVOA 2018 - 2019

- IVOA is still here because it is a good idea!!
  - *Integrated into planning – e.g. white papers for decadal review*
  - *A major part of new projects for interoperability in astronomy*
- Large data producing projects engaged
  - active participants in the IVOA process
  - *e.g. LSST: VO first approach, e.g. New projects coming – EST*
  - *e.g. Widening scope : Solar, Planetaria – Education, EOOSC*
- VO is integrated in many Astronomy data centres and archives
  - Often behind the scenes... *e.g. ESO science portal*
  - Huge benefits from shared software components
- Common challenges: *scalability, code to data, user platforms*

# Changing landscape

## Convergence of principles and language being used:

- **FAIR**
  - Findable, Accessible, Interoperable, Reusable
- **Open Science**
  - Data sharing with open and seamless services to analyse and reuse research data to improve science
- **Stewardship**
  - Human skills for curation, quality content, data management, services

# VO is FAIR

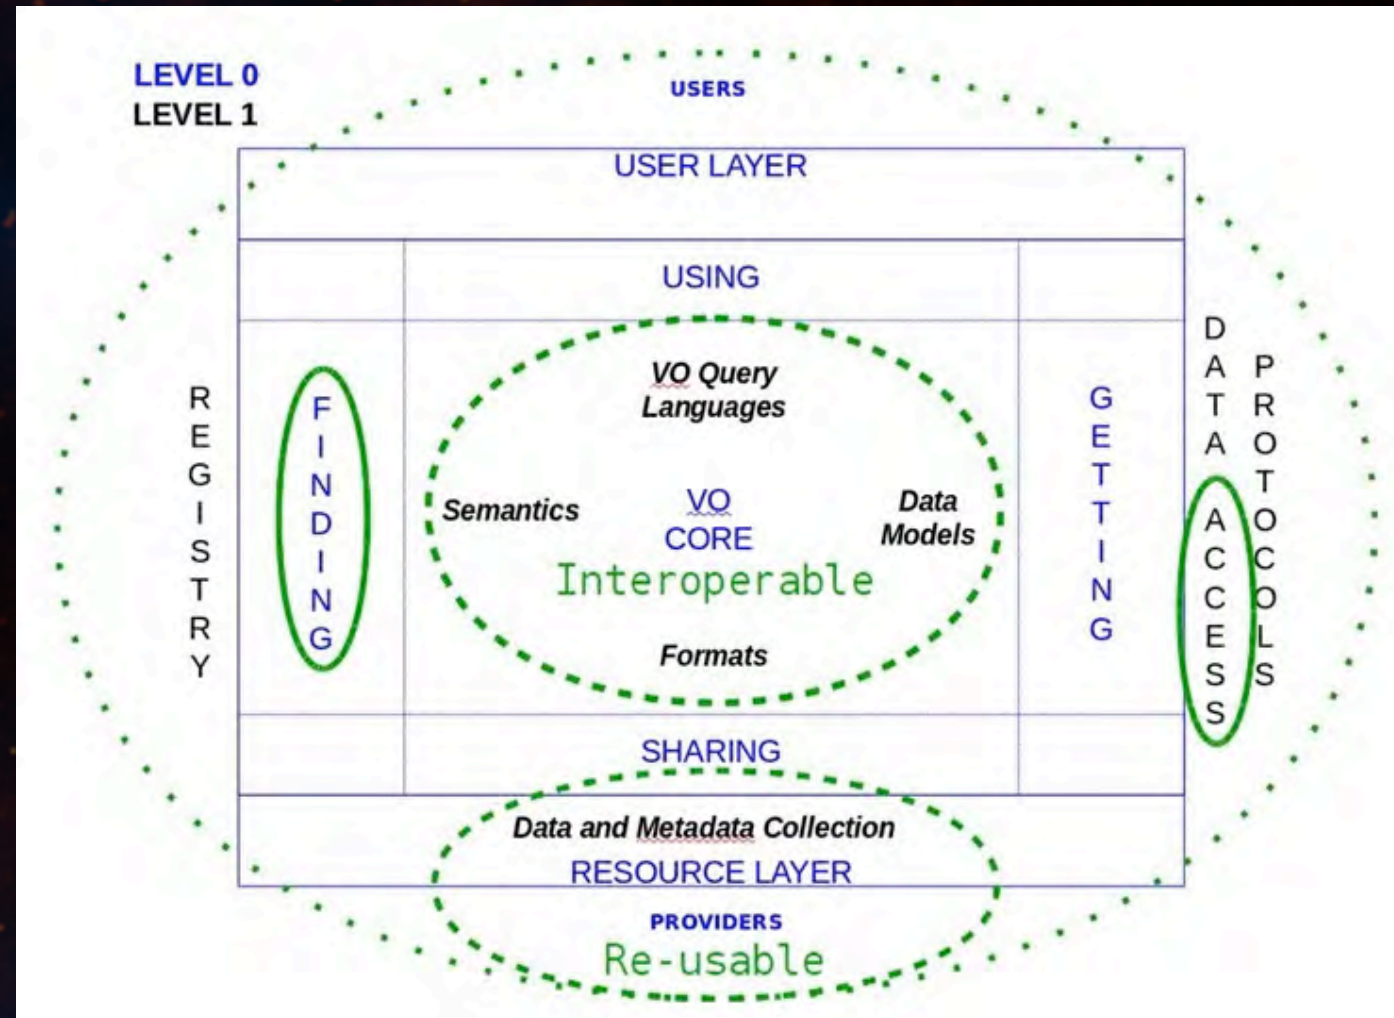

Making data:

**F**indable

**A**ccessible

**I**nteroperable

**R**eusable

International Virtual Observatory Alliance

Credit: X-ray: NASA/CXC/CfA/R. Tullmann et al.; Optical: NASA/AURA/STScI

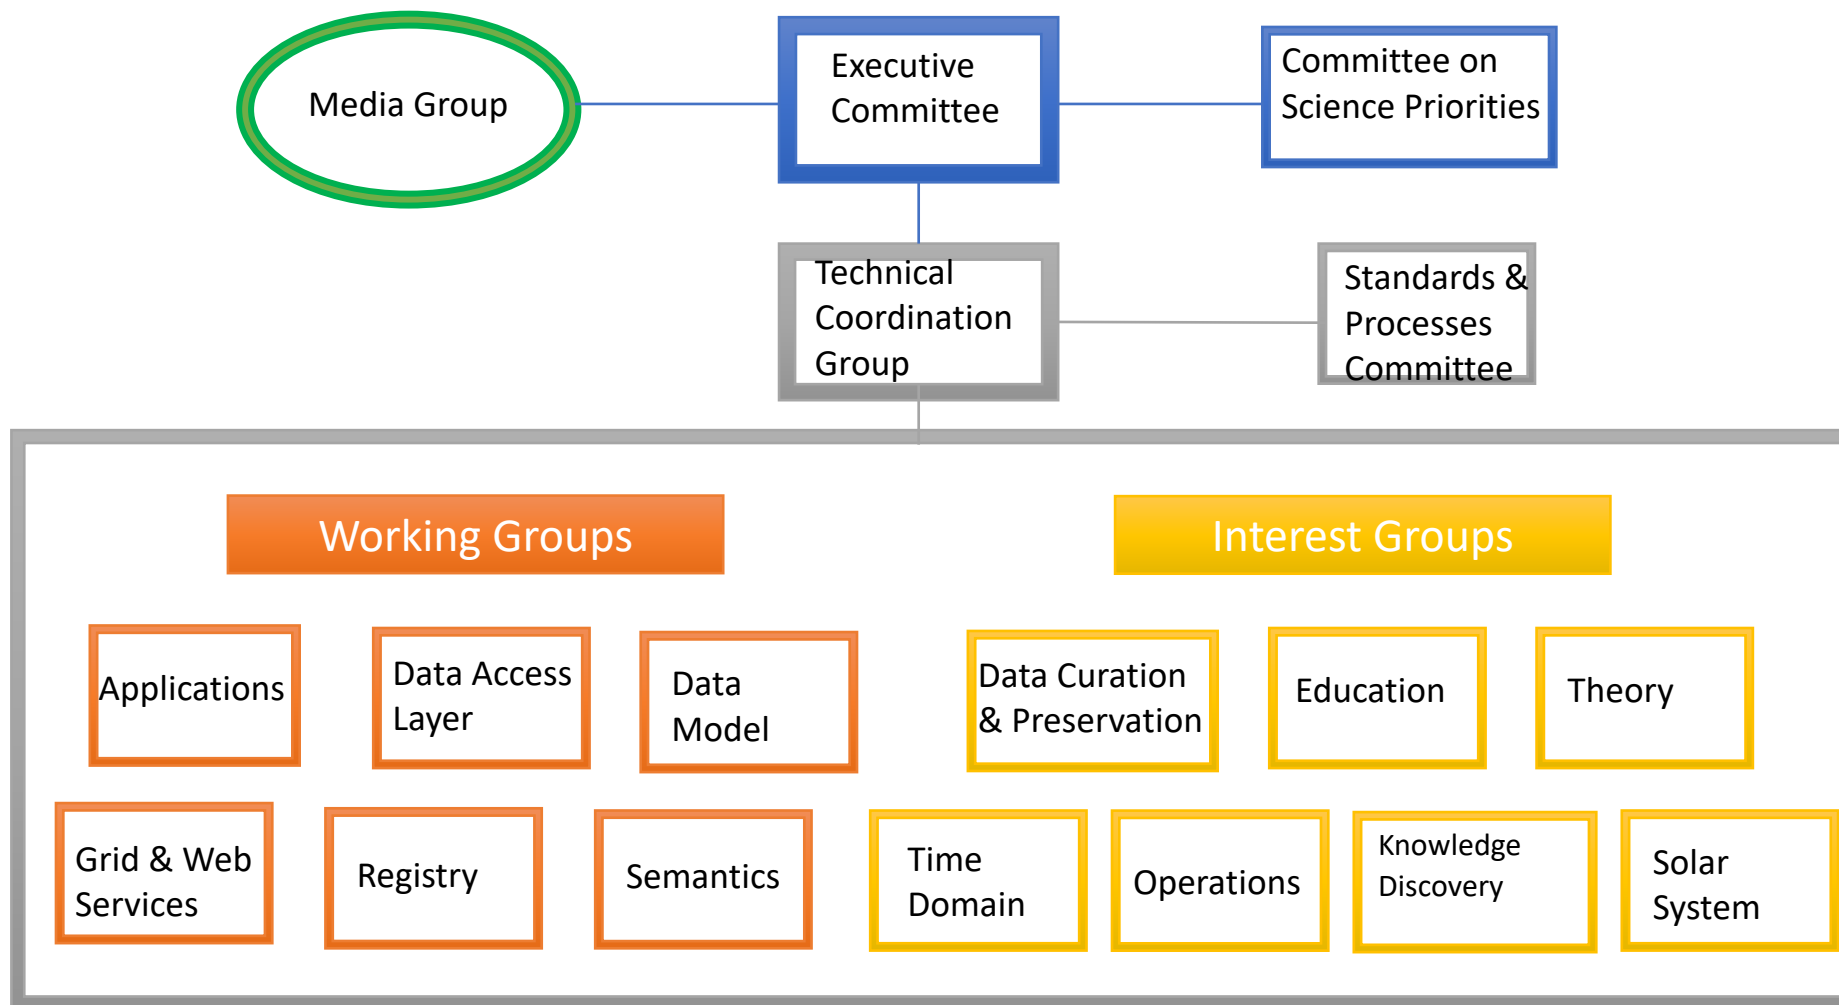

# Changing Scientific landscape

- Multi-messenger astrophysics
- Time Domain Astronomy – movie of the sky surveys/projects
- Rise of python – users and data centres
- Science analysis platforms: how will users access and analyse data?
- Prominence of machine learning
- Big Data
  - Scalability of data access mechanisms
  - Code to the data
- **See the CSP presentation!**

# IVOA Organization Chart

# Recent change: New IVOA Secretary

- An enormous thanks to Janet Evans

*(IVOA Secretary 9/2013 – 12/2018)*

- **Welcome Francesca Civano**

- Astrophysicist – Harvard Smithsonian CfA, Chandra X-ray Center
- Approved by Exec, December 2018
- Smooth transition 😊

## IVOA Newsletter - January 2019

[Subscribe](#) | [Newsletter archives](#) | [Write to the editors](#)

**IVOA Newsletter Editors:** Deborah Baines, Bruce Berriman, Jamie Anne Budynkiewicz, Theresa Dower, Giulia lafrate, Shanshan Li, Simon O'Toole, Yihan Tao.

The International Virtual Observatory Alliance (IVOA) was formed in June 2002 with a mission to facilitate the international coordination and collaboration necessary for the development and deployment of the tools, systems and organizational structures necessary to enable the international utilization of astronomical archives as an integrated and interoperating virtual observatory. The IVOA now comprises 20 VO programs from Argentina, Armenia, Australia, Brazil, Canada, Chile, China, Europe, France, Germany, Hungary, India, Italy, Japan, Russia, South Africa, Spain, Ukraine, the United Kingdom, and the United States and an inter-governmental organization (ESA). Membership is open to other national and international programs according to the [IVOA Guidelines for Participation](#). You can read more about the IVOA and what we do at <http://ivoa.net/about/>.

### What is the VO?

The Virtual Observatory (VO) aims to provide a research environment that will open up new possibilities for scientific research based on data discovery, efficient data access, and interoperability. The vision is of global astronomy archives connected via the VO to form a multiwavelength digital sky that can be searched, visualized, and analyzed in new and innovative ways. VO projects worldwide working toward this vision are already providing science capabilities with new tools and services. This newsletter, aimed at astronomers, highlights VO tools and technologies for doing astronomy research, recent papers, and upcoming events.

### IVOA NEWS

#### College Park IVOA Interoperability Meeting

The Northern Fall IVOA Interoperability Meeting was held on November 8-10, 2018 in College Park, Maryland, USA, supported by the NASA Astronomical Virtual Observatories (NAVO) and the US Virtual Observatory Alliance (USVOA). There were 109 registered participants who gathered for two and a half days of productive discussions.

The Working Group and Interest Group sessions covered scientific and technological aspects of interoperability of astronomy data and services. Many presentations reported on practical implementations of IVOA standards, showing results and providing feedback. Progress was reported on the 'Time

Domain' priority area. A number of contributions focussed on emerging needs of the astronomy community such as standards to support multi-messenger astronomy, and improving the access to VO resources via python language tools. Other topics included the status of operations in 'VO weather reports' and the use of Digital Object Identifiers (DOIs) for data and services.

<sup>5</sup>*Large Synoptic Survey Telescope, Tucson, AZ, USA*

**Abstract.** The International Virtual Observatory Alliance (IVOA) held its bi-annual Interoperability Meeting over two and half days prior to the ADASS 2018 conference. We provide a brief report on the status of the IVOA and the activities of the Interoperability Meeting held in College Park.

### 1. An alliance for the global vision of the Virtual Observatory

The Virtual Observatory (VO) is a collection of interoperating data archives and software tools that facilitate astronomical research. The overall goal is to support innovative research in astronomy by exploiting the full power of growing and emerging datasets and interoperable services. Many projects and data centres worldwide are working to make data and other resources work as a seamless whole. The International Virtual Observatory Alliance<sup>1</sup> (IVOA) is an organisation that debates and agrees on the technical standards that are needed to make the VO possible. Constituted in 2002 (see for example Quinn et al. 2004), the IVOA has now been joined by 21 national and international VO projects that meet bi-annually. Major IVOA accomplishments include standards for data and metadata (Data Models), data exchange methods (Data Access Layer; Query Language), and a registry that lists available services and identifies what can be done with them. Organisations have implemented VO-enabled tools and services that can interface seamlessly with VO services at their core. The IVOA acts as a focus for VO objectives, a framework for discussing and sharing VO ideas and technology, and a body for promoting and publicizing the VO.

# US VOA

- Science Policy - white paper effort for the US 2020 Decadal Review
  - Archival exploration – major source of scientific discovery
- Discusses important unanticipated discoveries, and advocate support for data management, software and archive interoperability. A collation of the white
- Papers can be seen at <https://arxiv.org/abs/1903.06634>
- Chandra Source catalogue, Chandra HiPS
- Multi-messenger VO services implemented
- DM, RoR, DCP activities

# US VOA - NAVO

- Science White Papers
  - Preparing to submit state of the profession white papers, which will advocate for the VO (due July 1).
- "Deep Learning for Multi-Messenger Astrophysics: A Gateway for Discovery in the Big Data Era" - Nature Reviews Physics, advocates the value of the VO in data discovery
- AAS meetings – python workshops, special sessions Astrophysics archives in the 2020s
- Connections to Astropy, initial effort on Registry access
- Data and tools: PanSTARRS, ZTF, NEOWISE, Montage (HiPS)

# US VAO - LSST

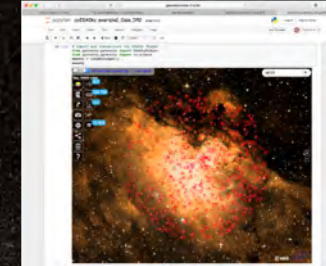

- “VO-first” approach to providing LSST data access Web services.
  - \* Adapting the OpenCADC TAP server code to work with the LSST Qserv parallel database.
  - \* Developed a Python SODA service implementation that works with the LSST Python science pipeline code base to perform its image cutout operations.
  - \* Deploying integrated single-sign-on for all the components of the LSST Science Platform (LSP)
  - \* Looking at adopting community VOSpace implementations, including CADC’s new POSIX-based server
  - \* Developed a Firefly-based Web front end to TAP queries.
  - \* Worked on STC transforms data model to ensure that it's compatible with current implementations.

# ESA VO activities since Nov 2018

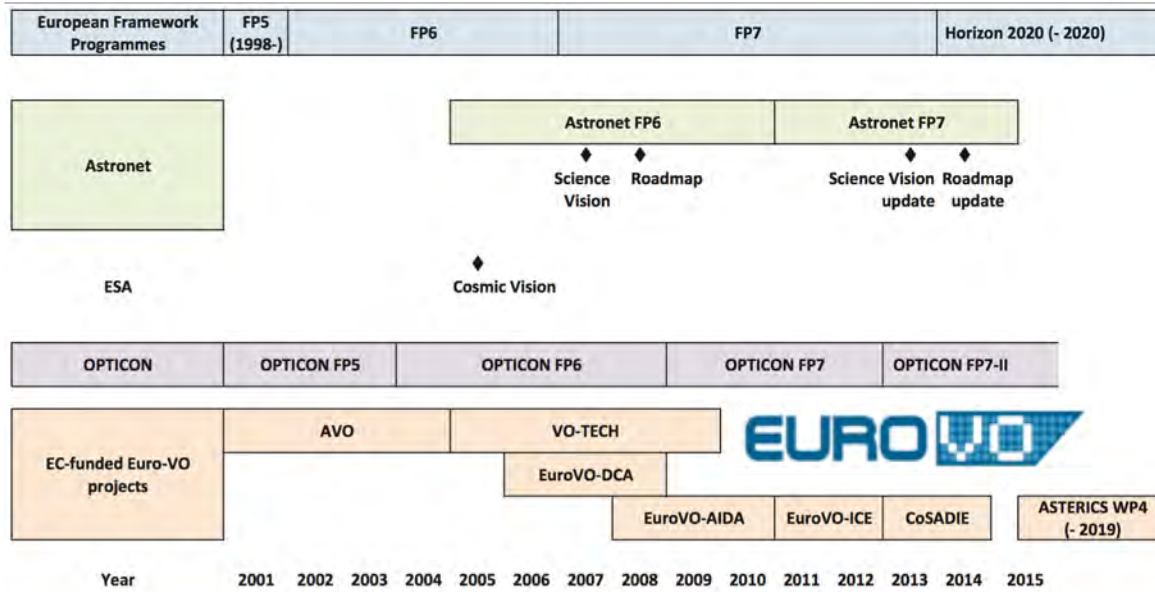

- pyESASky
  - Integration of ESASky into the Jupyter Notebook
  - Able to handle TAP, VOTable input and HiPS from users
- Gaia Archive
  - Very high use of the TAP module, in particular through [astroquery.gaia](http://astroquery.gaia)
  - Discussions on the way to serialise and access Gaia Time Series and Spectra and data models for DR3 -> ESDC promotion of IVOA DMs and protocols
  - Access to other TAPs through new Gaia Archive User Interface
- Euclid Archive
  - Continue of the preparation of the Euclid Archive, applying VO standards
  - TAP+, HiPS, SIAP...
  - Needs of "move code to the data" paradigm (to be discussed this interop)
- Visibility (ObjVisSAP) and planned observations (ObsLocTAP) protocols definition progressing
  - Prototype implementations for visibility protocols from Chandra and Gaia
  - Implementation for INTEGRAL ongoing

# EURO VO

## ● Timeline of VO development in European projects

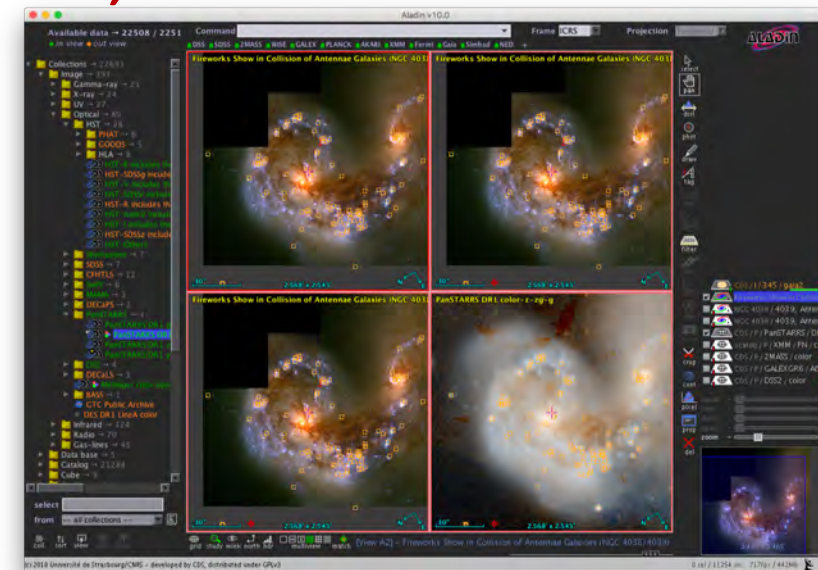

Genova et al. 2015

# Work Package DADI

Key results:

- The **ESFRIs** and pathfinders become **consumers AND actors of the VO**
- High impact on the IVOA standards, tools and topics (*requirements/feedback/effort/expertise*):
  - **Multi-D data standards, All-sky approach, Time Domain, Provenance**
  - **Reference implementations & prototype interfaces**
- Impact of the VO school training activities

**Radio**

**SKA**

**JIVE-VLBI**

**Visible light**

**ELT**

**ESO**

**EST**

**Gamma rays**

**CTA**

**Accelerator-based Particle Physics**

**HL-LHC**

**CERN**

**Accelerator-based Nuclear Physics**

**FAIR**

**Gravitational Waves**

**EGO-VIRGO**

**Cosmic-rays Neutrinos**

**KM3NeT**

1. Implementing **Science Analysis Platforms** for EOSC researchers to stage data collections, analyse them, access ESFRIs' software tools, bring their own custom workflows.
2. Contributing to the **EOSC** global resources federation through a Data-Lake concept implementation to manage extremely large data volumes at the multi-Exabyte level.
3. Supporting **"scientific software"** as a major component of ESFRI data to be preserved and exposed in EOSC through dedicated catalogues.
4. Implementing a community foundation approach for continuous software shared development and training new generation researchers.
5. ***Virtual Observatory standards and methods for FAIR principles to a larger scientific context; demonstrating EOSC capacity to include existing frameworks.***
6. Further involving SMEs and society in knowledge discovery.

# VObs.it (I)

- VObs.it staff participated in the EU ASTERICS project, and organised (Jan 19) in Trieste a meeting on Authentication and Authorisation.
- VObs.it staff have started participation in the EU ESCAPE project. Our role in the project is the integration of astronomy VO data and services into the European Open Science Cloud (EOSC).
- Funding for VObs.it has been secured by INAF for the 2019 fiscal year.
- Collaboration on VO-related activities has started between INAF and ASI: this involves the two data centres (IA2 and SSDC respectively) and VObs.it (IVOA-related) activities.
- Initial steps have been taken to migrate to INAF-OATs the part of the IVOA web currently hosted at IUCAA.

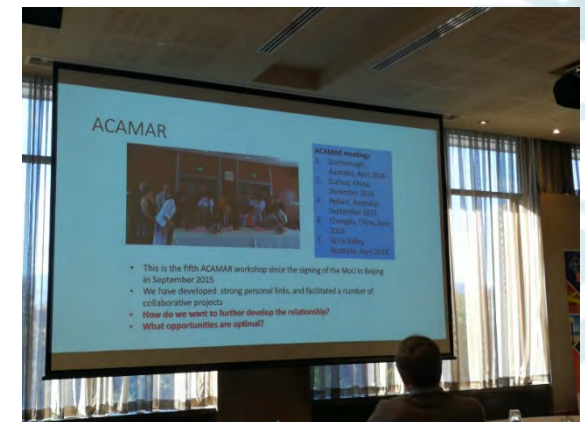

## VObs.it (II)

- Marco Molinaro (IVOA DAL Chair) and Giulia Iafrate (IVOA Doc Coordinator) were appointed to permanent INAF positions.
- Two new INAF fixed-term staff were selected to work full-time within VObs.it and have taken up duty at INAF-OATs (Trieste). They are Chaitra (formerly at CDS, Strasbourg) and Kalyani Pedamkar.
- A VO-related presentation (on VO Forum and Training activities for new-generation infrastructures) was made at the Integrating Event of the ASTERICS project.
- A VO related event (presentation of Virtual Reality contents for EPO) was made as conclusion of ASTERICS project

# Communities and Involvement

- Nov. 2018, the [China-VO and Astroinformatics 2018](#) was held successfully in Jingdezhen, more than 170 persons attended the event.
- Dec. 2018, the Proposal of [Informatization Working Committee \(IWCC\)](#) of Chinese Astronomical Society was approved.
- Apr. 2019, at the [ACAMAR 5](#) (Australia-China Consortium for Astrophysical Research), Chenzhou gave a talk about IVOA.
- Under the name of [EduIG and IAU DAEPO WG](#)
  - IAU GA30 Vienna
  - WG renew application
  - IAUS 358 Astronomy for Equity, Diversity and Inclusion — a roadmap to action within the framework of the IAU 100th Anniversary
