

Observatoires Virtuels France

Françoise Genova

CENTRE DE DONNÉES
ASTRONOMIQUES DE STRASBOURG

□ At this meeting

- 126 participants, 50 from French labs
- Paris Observatory (PADC and most Departments/Institute),
Strasbourg CDS and Observatory,
Grenoble, Marseille, Montpellier, Paris-Sud, Toulouse
- Astronomy, planetary sciences, atomic and molecular physics, astroparticle physics, geophysics (GIS)
- *French astronomical society meeting in Nice this week*

HOW DID IT BUILT UP?

□ Starting point: the CDS

- Created in 1972 with the mission to:
 - collect useful information concerning astronomical objects that is available in computerized form;
 - upgrade these data by critical evaluations and comparisons;
 - distribute the results to the astronomical community;
 - conduct research, using these data.
- SIMBAD 1971 (precursor), VizieR 1996, Aladin Java 1999
- First web service: 1993

□ Pre-VO standards and tools at CDS

- Interoperability in 1998
 - CDS GLU : registry of distributed resources which keeps track of the web addresses and allows automated modification in all web pages by changing the registry record
 - Aladin: interactive sky atlas giving access to distributed image archives
 - Unified Content Descriptors: describing quantities, derived from 100 000 VizieR columns, ESO/CDS Data Mining Project, will be one of the first VO standards
- In 1999: astrores
 - Describing astronomical catalogues and query results with XML
Ochsenbein et al., 2000 (ADASS 1999)
- In 2001: IDHA project, precursor of the Characterization Data Model

Interoperability standards

*A slide presented to
the CDS SC in Nov. 2001*

- Essential ingredients of the global VO
Information retrieval, information exchange, integration
of query results, common tools
- AVO/NVO collaboration
Visit of R. Williams (VO architect)  Starting point
of the first VO
standard,
VOTable
(March 2002)
- A roadmap for the VO Garching meeting
(May 2002)  IVOA created
at this meeting

F. Genova, CDS Council meeting, 2001/11/27-28

14

□ Pre-IVOA Interoperability Meeting

Strasbourg, 28-29 January 2002

- Meeting of the OPTICON Interoperability Working Group
- VOTable (finalised in March 2002)
- 2001: AVO, NVO and AstroGRID
- May 2002: IVOA

□ Action Spécifique Observatoire Virtuels France

- Regular strategic exercises CNRS-INSU (Universe Sciences National Institute)
- Astronomy-Astrophysics 2003
 - Recommends the creation of a coordination structure at the national level
 - Recommends to begin to assess inclusion of modelling data in the Virtual Observatory
- The coordination activity has been regularly evaluated positively since then

□ OV France = ASOV

- Creation of the Action Spécifique Observatoires Virtuels France in 2004
- Created by CNRS-INSU with support from CNES
- Scientific Council: representatives of the Scientific Programmes which cover the different sub-disciplines of astronomy + a few specialists

□ ASOV mandate

- The ASOV Chair is the French VO representative in the IVOA Exec
- ASOV role
 - Coordinate VO activities at the national level
 - Disseminate VO standards and methods
 - >> Coordination of technical exchanges between teams working on scientific data
 - Synergy with the Programmes
- Covers all the disciplines of « CNRS Section 17 »
 - Astronomy
 - Solar system and solar studies
 - Space plasma physics
 - The astronomy facet of astroparticle physics
 - Atomic and molecular physics of astronomical interest

□ ASOV activities

- Support to travels to IVOA meetings and similar meetings for other disciplines (since Pune 2004)
 - Exec, WG/IG chairs/vice-chairs, one person per lab
- Support to collaboration meetings between French teams, regional and thematic meetings
- *Support to this meeting*
- An annual meeting
- Since 2016, the meeting is organised back-to-back with a « Semi-Hack-a-Thon »

□ Activities towards the science community in France

- A few schools organised by ASOV
- French participants in the annual Schools organised by the VO European projects
- Courses in doctoral schools
- Local initiatives, for instance in Nice 2017, 2019
- ASOV can support tutors' travel costs

École Observatoire Virtuel à l'OCA

Nous avons tenu une école d'initiation aux outils de l'Observatoire Virtuel (OV) les 26 et 27 Septembre 2017. Le but de ces 3 demi-journées était de montrer comment des outils simples de l'OV permettent de répondre à des besoins quotidiens dans la recherche, en particulier sur de très grands ensembles de données ("Big Data"):

- Recherche et récupération d'images, de spectres, et de catalogues;
- Identification et croisement des sources, conversion de données et de format;
- Analyse (par exemple, ajustement de SED, isochrone, modèles spectraux, ...)

Les différents tutoriels ont été préparés et encadrés par

- Enrique Solano, du Centre d'Astrobiology (CAB) et Spanish Virtual Observatory (SVO), Madrid
- Ada Nebot, du Centre de Données de Strasbourg (CDS)
- Jérôme Berthier, de l'Institut de Mécanique Céleste et de Calcul des Ephémérides (IMCCE), Paris
- Benoit Carry, de l'Observatoire de la Côte d'Azur (OCA), Nice

□ ASOV impact

- Structuring role at the national level
- Creation of a French VO community, very active in the IVOA
 - Training on the implementation of IVOA standards since 2004
 - Significant participation in IVOA meetings and in WG/IG leadership
 - CDS was the starting point and has been a pillar of ASOV, now it is a national community

□ Strong presence in the VO development

- 45 IVOA standards
 - 17 have at least one editor from France
 - 27 have at least one French author
- Participation in standards: CDS/ObAS, OP, Grenoble, Montpellier, Toulouse
- Tools (Aladin, Cassis)
- Validation tools (OP)

□ A community of VO users/implementers

- Interest and usage in all the labs which manage data services
- Participation in the last annual meeting: nearly all the places where there is an astronomy lab
Besançon, Bordeaux, Grenoble, Marseille, Montpellier, Nice, Paris, Paris-Sud, Strasbourg, Toulouse

□ The first VO training: 11-13 Oct. 2004

- *Lundi 11 octobre, après-midi*
 - [Présentation Générale de l'IVOA](#) (FG)
 - [Architecture du VO](#) (SD/TB)
 - [VOTable : définition et outils](#) (FO)
 - [TP sur VOTable : transformation d'une table TSV en VOTable avec différents outils - Sujet et exemples en ligne](#) ("ConVOT", "SAVOT", PERL...- TB)
- *Mardi 12 octobre, matin*
 - [Expérience acquise en physique des plasmas](#) (C. Harvey)
 - [Application de VOTable aux données solaires](#) (MS)
 - [UCD](#) (seulement ucd1+) (SD)
 - [TP sur les UCD](#) : assignation d'UCD à une table, utilisation dans les filtres Aladin (SD)
- *Mardi 12 octobre, après-midi*
 - [DAL](#) : SIA, SSA, STC...(FB)
 - [Registry](#) (PF)
 - TP : Description d'un spectre ou image / SSA, SIA - [Sujet](#) et [exemples](#) en lignes - (FB + PF)
Inscription de cette ressource dans un registry - [Sujet](#) : cf. fin de la présentation [Registry](#) - (PF)
- *Mercredi 13 octobre, matin*
 - [Web Services](#) (AS)
 - Démonstration AVO, janvier 2004: [les standards en action](#) (MA)
 - TP : Web Services, cotés client et serveur - [Sujet et exemples en ligne](#) (AS)
- *Mercredi 13 octobre, après-midi*
 - Questions diverses des utilisateurs, étude de leurs problèmes particuliers,...

□ Interdisciplinary impact

- Leadership in European projects in support to VO (project or Work Package level)
- ASTERICS (2015-2019): large facilities in astronomy and astroparticle physics – Multi-messenger astronomy – CTA, KM3Net, EGO/VIRGO ...EST
- ASTERICS – ESCAPE (2019-2023): + EST

□ Interdisciplinary impact

- French leadership/key role at the European and international level on disciplinary interoperability initiatives
 - EuroPlaNet/VESPA
 - Virtual Atomic and Molecular Data Centre
 - Space Plasma Physics was already well organised
- Reuse/customisation of VO standards and tools

Welcome to the VAMDC portal!

VAMDC aims to be an interoperable e-infrastructure that provides the international research community with access to a broad range of atomic and molecular (A&M) data compiled within a set of A&M databases accessible through the provision of this portal and of user software. Furthermore VAMDC aims to provide A&M data providers and compilers with a large dissemination platform for their work.

VAMDC infrastructure was established to provide a service to a wide international research community and has been developed in conjunction with consultations and advice from the A&M user community.

[Currently we have 32 databases running and ready to serve you with the data.](#)

□ Conclusion

- Focused support to travel can be a powerful tool!
- Dissemination of knowledge and good practice is essential for VO adoption by data providers
- People participate in the VO and ASOV because it is their own interest
- They bring their requirements and expertise to the IVOA
- They implement the VO standards and use the tools to improve their services
- VO-enabling services and tools provides better exposure and usage
