

# Review: Semantics in Bologna

Markus Demleitner, chair

Carlo Maria Zwölf, vice-chair

- product-type vocabulary: Last-minute changes during Datalink RFC – in particular, keep #spectrum from becoming “anything with a spectral axis”.
- facilities vocabulary: Check out Baptiste’s talk for some taste of SPARQL.
- UCD list: Do visit UCDDList\_1-6\_RFM on the twiki and make up your mind; the UCD committee depends on your input!
- RDFa in VOTable: Crazy SciFi by the chair emeritus. Lots of little problem, but mainly: Is it worth it?

# The Road Ahead

- product-type needs to converge as fast as possible
- VOUnits 1.1 RFC should start mid-June-ish (empty units; %, ppm and friends)
- UCD list 1.6: review now, PEN around Tucson
- sheperd UAT handling in VOResource 1.2 during its RFC
- facility vocabulary: prototyping continues
- get VO vocabularies into Linked Open Vocabularies
- As usual: process VEPs – keep them rolling in!

Bye-bye!
