IVOA interoperability meeting
Garching, November 9-12, 2009

Motivation

- A huge amount of data is going to be available in the near future.
 - light curves
- Seismology information is a great help to restrict stellar properties.
 - Information of stellar structure.
 - Information of stellar evolution.
 - Only way to probe stellar interiors.
- Much better characterization of stars
 - Stars harbouring planets
 - ...

Motivation

- A huge amount of data is going to be available in the near future.

Motivation

- A huge amount of data is going to be available in the near future.
 - light curves from different missions.
- We need an easy and efficient way to compare those many data with theoretical models.
 - To analyze observed objects properties.
- Previous important work: ESTA project for CoRoT mission.
 - <http://www.astro.up.pt/corot/models/>
 - Difficult task. Problems identified
 - Access to models, different formats, etc.

Asteroseismology VO tool

- Currently 4 different codes integrated.
 - CESAM, CESAM2k structure codes.
 - FILOU, GraCo oscillation codes.
 - Different research groups interested in adapting their codes.
 - A S3 server for each code.
 - More that 500.000 models.
 - Almost 1Tb of data.
 - Growing.
- All interactions between tool and data services: S3
- First Data Model for astroseismology data.
 - 17 star global properties.
 - 44 star shell variables.
 - 35 seismic properties.

Cesam2k: an interesting case

CESAM2k evolutionary code

You can search the database in terms of several parameters (move your mouse over the (?) symbol to see a description and the available range of values for each one).

- Please, select a range for each parameter that you want to use in the search and then click the "Search" button to retrieve a list of the available files
- Take into account that some combinations of values could correspond to no result
