

Obscore data model update and DataSet DM compatibility

M.Louys

Banff Interop Meeting

Oct 2014

Missing fields for serving pixelated N-dim arrays data

Expressed as a requirement for SIAv2 at madrid Interop.

1. Number of subarrays (usually but not always 1)
"num_array" integer
2. Number of array axes (dimensionality) of the main array
"num_axes" integer
3. Length of each axis
"axis_length" integer array, e.g., "512 512 3" is the simplest representation
4. Number of WCS axes (may differ from num_axes)
"num_wcs_axes" integer
5. Coordinate type on each WCS axis
"axis_wcs_type" whitespace delimited list of axis types
e.g RA-TAN DEC-TAN WAVELENGTH

A new class name **DimensionsAndMappingSummary**

DimensionAndMappingSummary Class

Column name	Utype	Units	Datatype	Definition	Mandatory Status	STC2 Counterpart
num_array	ObsDataset.DimensionAndMappingSummary.numArray	unitless	integer	Number of Subarrays in the Dataset	NO	N/A
num_axes	ObsDataset.DimensionAndMappingSummary.numAxes	unitless	integer	Number of array axes (dimensionality) of the main array	NO	PixelSpace.naxes
axis_length	ObsDataset.DimensionAndMappingSummary.axesLength	unitless	integer	Length of each axis	NO	PixelSpace.pixelAxes.length on each axis
num_wcs_axes	ObsDataset.DimensionAndMappingSummary.numWCSPAxes	unitless	integer	Number of wcs axes (may differ from num_axes)	YES	N/A
axis_wcs_type	ObsDataset.DimensionAndMappingSummary.axisType	unitless	string	Coordinate type on each WCS axis following WCS definition (list)	YES	N/A

Data discovery using redshift axis

- Use cases as in Obscore document:

A.3.2. Use case 3.2

Show me a list of all data that satisfies:

- I. DataType=cube with 3 dimensions
- II. Axes includes Velocity
- III. Axes includes RA
- IV. Axes includes DEC
- V. Velocity Resolution better than 50 km/s
- VI. RA includes 16.000
- VII. Dec includes +41.000

- Suggestions circulated January 2013.

- Redshift frame refposition
- Redshift frame doppler definition
- + regular parameters as on other axes

Redshift ObsCore DM fields

DOPPLER CHARACTERISATION (RedShift)					
d_ucd	Char.DopplerAxis.ucd	unitless	string	Nature of the Doppler axis	NO
d_unit	Char.DopplerAxis.unit	unitless	string	Units along the Doppler axis	NO
d_calib_status	Char.DopplerAxis.calibrationStatus	unitless	enum	Type of Doppler coord calibration	NO
d_reference_position	Char.DopplerAxis.ReferencePosition	unitless	enum	Phase space origin for Doppler velocity, also named Reference Position in STC REC, Section 4.4.1.1.1	YES
d_definition	Char.DopplerAxis.definition	unitless	enum	Doppler velocity definition: RADIO, OPTICAL, RELATIVISTIC, as in STC REC, Section 4.4.1.4.2	YES
d_min	Char.DopplerAxis.Coverage.Bounds.LoLimit	km/s (def)	double	Start in Doppler coordinates	YES
d_max	Char.DopplerAxis.Coverage.Bounds.HiLimit	km/s	double	Stop in Doppler coordinates	YES
d_res_power	Char.DopplerAxis.Resolution.ResolPower.refval	unitless	double	Value of the resolving power along the Doppler axis. (Reference)	YES
d_res_power_min	Char.DopplerAxis.Resolution.ResolPower.LoLimit	unitless	double	Resolving power min value on Doppler axis	NO
d_res_power_max	Char.DopplerAxis.Resolution.ResolPower.HiLimit	unitless	double	Resolving power max value on Doppler axis	NO
d_resolution	Char.DopplerAxis.Resolution.refval.value	km/s	double	Value of Resolution along the Doppler axis	NO
d_stat_error	Char.DopplerAxis.Accuracy.StatError.refval.value	km/s	double	Doppler Coord statistical error	NO

Articulation of current data models

- ObsCore DM → Discovery oriented
- Dataset DM → Abstract view on generic datasets

Two views on a common set of metadata

- Take the benefit of each
- Recognise the historical progression :
 - Obscore has been an efficient test bed for assessing the benefits of a common description across archives to foster interoperability.
- How to homogenise ?

Obscore:Observation → Obscore:Dataset like in
DatasetDM

Extension of data models

- Re-using is useful
 - E. g Experiment (SimDM) derived to represent the action/process of observation
 - Curation
 - In Resource metadata , Spectrum1.1, 2.0 , Obscore,
 - Dataset DM
- Allowing any kind of data model re-use within the VO layers (data access) is dangerous
 - Major side effects : interoperability is lost

Context of data model extension ??

- If I need a new model , the reason is:
- New types of data/metadata are delivered in the community
- VO standards are too difficult to read , boring , and too abstract
- VO Implementation support is lacking :
More documented examples required
