IVOA Interop 2019 Groningen - October 2019

The State of pyvo

Agenda

- How is pyvo these days?
- Since the Hackathon in Paris
- New features
- Bug Fixes
- Future plans

How is pyvo these days?

Since the Hackathon in Paris

pyvo 1.0 released

- Kept up with the Astropy community on the Astropy Slack at #pyvo
- Repository now under the Astropy organization on GitHub
- Got into a great pull request process
- Deprecated python 2 support after releasing a minor release
 - 0.9.3 will be the last python 2 release
 - 1.0+ will be python 3 only

Since the Hackathon in Paris

Pull Request Process

- Fork pyvo on GitHub
- Push a branch with your change, and create a pull request on GitHub
- Travis builds automatically check style and run tests
 - We've fixed the builds, and don't allow merges that aren't with the green check
 - Check pep8 style automatically
 - Run tests and code coverage
 - Build docs using sphinx_astropy
- Maintainer does a code review and approves, merges it to master for the next version

New Features in pyvo 1.0

Two features

- Listing past jobs from a TAPService
 - service.get_job_list() and service.get_job(12345)
 - Parses the information from the UWS async endpoints and returns it out into python objects
- Authentication support for TAP based on capabilities
 - Look at pyvo/examples/auth for examples for CADC and GAIA using certificate and cookie auth
 - If your service uses auth, please feel free to add an example or ask for help
- Deprecated python 2 support

Bug Fixes in pyvo 1.0

Bugs Fixed

- Fixed a number of small build breaks integrating with astropy_helpers
- Fixed a compatibility issue with retrieving CADC async results (#148)
- Fixed some AstropyDeprecationWarnings (#164)
- Fixed registry searching when using hash lists (#175)
- Examples fixed and updated:
 - New image catalog search examples (#172)
 - Don't try to install them into /usr/local/bin (#166)
 - Fix and improve regtap example notebook (#177)

Future Plans

Hacktoberfest and Beyond

- pyvo needs you to make pull requests for pyvo 1.1!
 - https://hacktoberfest.digitalocean.com
 - 4 pull requests gets you a t-shirt!
- Please report any issues on GitHub that you see
 - For trivial fixes or document fixes, feel free to make a pull requests
- Looking for additional maintainers
- Anyone can contribute features or bug fixes, and please do!
- pyvo needs a fancy logo for people's slides

Thank you all

pyvo maintainers: Christine Banek Adrian Damian Stefan Becker Ray Plante
