

# Strategy for Data models

**DM session 1**

**Monday OCT 27<sup>th</sup>**

# Observation DM

- Spectrum DM and Characterisation DM are now stable and have many implementations .
- Most components are reusable for Observation
- This strategy is compatible to DAL Interface architecture
  - Generalise existing observation types
- Coordinates are modeled with the Space Time Coordinates DM, and serialised via STC-X or Utypes

# Requirements for reusability

- Simplify names : classes attributes → Utypes  
See Utype discussion in DM2 session
- Develop many prototypes to test possible combinations on various kind of observations
- Keep a general **Provenance** *core model* for all regimes and derive specific DMs for specific regimes :  
Radio observation need a different observing configuration description
