1. Identifiers 2.0 after public RFC

(cf. Fig. 1)

Markus Demleitner
msdemlei@ari.uni-heidelberg.de

(cf. Fig. 2)

- What's happened. . .
- . . . and what will happen now.

2. What's happened?

- We're deprecating the term IVORN – it's been used inconsistently, and the parent term URN is deprecated, too.
- It's now IVOID (full thing) and Registry part.
- Examples for all the parts.
- No explicit resolution algorithm any more.
- Instead: "Publishers are encouraged to declare at least one [PubDID-handling] capability [using] the Registry part of a PubDID."

3. Going on

Identifiers 2.0 is now in TCG review.

[Don't tell anyone, but if you spot a severe error, I'd still like to know]

- If you are in the TCG: Review!
- If you know someone in the TCG: Bug him/her to Review!
- If you mint PubDIDs: Fix them to be compliant and try them with the PubDID resolver[1]

Thanks!
