CSP Meeting 07.11.2022

Agenda :
- Highlights
- Follow-up from interop
- Proposal for plenary sessions
- Meeting and impact on newcomers session

Minutes:
- Discussed the highlights during Interop. The CSP agreed it was very good in terms of attendance and topics discussed. There were a couple of things the CSP would like to see followed up in the next Interop:
  - Cloud and science platforms. Feedback from LSST on standards is expected. JE will have a visit from Frossie Economou. What is the relationship between CAOM and LSST?
  - Suggestion of plenary session on DOI, VO registry, data citation practices, ADS and journals, best practices.
  - DataLink. There were some presentations, and the take-up message is there are very few services providing DataLink. It's difficult to see why it's not adopted more. Is it difficult to implement or are we not effectively communicating how powerful it can work? Should we provide more science-driven tutorials to providers in the community? AN should bring this to the TCG.
  - Obscore: extensions of radio, time-domain, high energies? What is the relationship with CAOM? We should see with P.D.
  - Newcomers: it has been suggested that documentation for newcomers can be improved depending on the audience. High level, read the docs kind of thing would be nice. No action for the moment.
- Next Interop will be hybrid, but we should encourage in-person as much as possible because there is more action and momentum.
  - The Newcomers' session will be impacted; suggest scheduling it the Friday before the TCG meeting
