

CSP Meeting 19.09.2022

Agenda:

- LineTAP updates
- Follow-up on Data formats
- Newcomers session
- Webpage

Status report :

- LineTAP updates: there was a DAL running meeting to discuss about LineTAP, good communication between the interested parties and the definition of which parameters are needed within this new protocol is underway.
- Follow up on Data formats:
 - JSON - There's been some discussion around this subject on Slack. This was initiated and motivated by GCN moving away from VOEvent and adopting other messaging technologies (Kafka / Avro). The CSP should support to have some discussion within the next interop around this subject. From last TCG meeting I understood that Pierre Le Sidaner (Apps) and Tess (Registry) are having a close look into the topic, I think we should set a meeting to discuss about this topic and share our thoughts.
- Newcomers session :
 - Hendrik asked for CSP participation following the same format as last time and I have agreed to take part. Short intro by the Exec. While the meetings are still online we can continue doing this without much thought, but once the meetings are in person we need to come-up with a working solution for the newcomers session. We can come back to this issue when needed.
- Webpage :
 - The webpage ivoa.net points to a glossary for developers maintained at the twiki and which has some technical terms and a list of acronyms: <https://wiki.ivoa.net/twiki/bin/view/IVOA/VOGlossary> Recently some actions took place to add new terms. Hendrik and Marco have worked together to update this list. While the list has terms related to the IVOA, there are more general terms for example items such as "C+" or "ASCII" which I'm not sure should be there and there might be other terms which are missing from the IVOA vocabulary. The CSP with the TCG could revise the list and decide if some elements don't belong there.
